

# Package: RRASSLER (via r-universe)

December 6, 2024

**Type** Package

**Title** R based HEC-RAS model accounting wrestler

**Version** 0.1.1

**Maintainer** Jim Coll <james.coll@noaa.gov>

**Description** A package for making HEC-RAS data more FAIR by cataloging models, cross sections, and points for accounting, interoperability, and reuse in RAS and other applications. These tools are experimental, preliminary or provisional and are subject to revision. They are being provided to meet the need for timely better science and emergency response.

**License** MIT + file LICENSE

**URL** <https://github.com/NOAA-OWP/RRASSLER>

**BugReports** <https://github.com/NOAA-OWP/RRASSLER/issues/new>

**Depends** R (>= 3.5), magrittr, foreach, data.table

**Imports** AOI, arrow, aws.s3, dm, formattable, labelled, doParallel, dplyr, glue, httr, lubridate, lwgeom, nhdplusTools, parallel, rhdf5, sf, sfheaders, stringi, stringr, tidyr, unglue, utils

**Suggests** knitr, cowplot, DiagrammeR, ggplot2, leafem, leaflet, leafpop, mapview

**Remotes** grimbough/rhdf5, mikejohnson51/AOI,

**Encoding** UTF-8

**RoxygenNote** 7.3.2

**LazyData** true

**VignetteBuilder** knitr

**Config/pak/sysreqs** cmake libgdal-dev gdal-bin libgeos-dev libglpk-dev  
make libicu-dev libpng-dev libxml2-dev libssl-dev libproj-dev  
libsqlite3-dev libudunits2-dev libx11-dev zlib1g-dev

**Repository** <https://owp-spatial.r-universe.dev>

**RemoteUrl** <https://github.com/NOAA-OWP/RRASSLER>

**RemoteRef** HEAD

**RemoteSha** d23c9bf2772bdefbb8e9daeed2ab40845c0205e1

---

append\_catalog\_fields *append\_catalog\_fields*

---

### Description

adds helper fields to accounting.csv.

### Usage

```
append_catalog_fields(
  path_to_ras_dbase = NULL,
  out_name = NULL,
  overwrite = FALSE,
  is_verbose = TRUE,
  HUC8_override = NULL
)
```

**Arguments**

path_to_ras_dbase	the path to the folder in which you are building your catalog, Default: NULL
out_name	the name of the csv you want to generate, Default: NULL
overwrite	flag to dictate whether or not to overwrite the out_name, should it exist. set to TRUE to delete and (re)generate, FALSE to safely exit, Default: FALSE
is_verbose	flag to determine whether print statements are suppressed, TRUE to show messages and FALSE to suppress them, Default: TRUE
HUC8_override	a path to the spatial key if you need to run this over a temp dir for eg ras2fim, Default: NULL

**Details**

TRUE

**Value**

a new csv with helper columns

**See Also**

[glue mutate s2](#), [st\\_transform](#), [st\\_read](#), [st\\_crs](#) [fwrite](#)

Other post-process: [refresh\\_master\\_files\(\)](#)

**Examples**

```
## Not run:
if(interactive()){
  #EXAMPLE
  RRASSLER::append_catalog_fields(path_to_ras_dbase = "G:/data/ras_catalog", out_name = "OWP_ras_model_catalog.csv")
}

## End(Not run)
```

---

cloud\_ingest\_record    *cloud\_ingest\_record*

---

**Description**

Deprecated - add a file as a record in the RRASSLED structure - Deprecated

**Usage**

```
cloud_ingest_record(
  in_file = NULL,
  ras_dbase = NULL,
  root_bucket = NULL,
  code_to_place_in_source = NULL,
  proj_override = NULL,
  apply_vdat_trans = FALSE,
  is_quiet = FALSE,
  is_verbose = FALSE,
  overwrite = FALSE
)
```

**Arguments**

<code>in_file</code>	the path to the file on disk that we want to ingest, Default: NULL
<code>ras_dbase</code>	A path to an S3 bucket to write your RRASSLED catalog to., Default: NULL
<code>root_bucket</code>	first path in s3 url, will auto-populate as needed, Default: NULL
<code>code_to_place_in_source</code>	a code to place in the metadata as the owner of the model, Default: NULL
<code>proj_override</code>	a string to override projection information should none be found, Default: NULL
<code>apply_vdat_trans</code>	Should VDATUM be applied to the HEC-RAS model geometry. See <a href="https://vdatum.noaa.gov/">https://vdatum.noaa.gov/</a> , Default: FALSE
<code>is_quiet</code>	flag to determine whether print statements are suppressed, TRUE to suppress messages and FALSE to show them, Default: FALSE
<code>is_verbose</code>	flag to determine whether internal print statements (i.e. cross section parsing, vdat trans, file info) are suppressed, TRUE to show these messages and FALSE to suppress them, Default: FALSE
<code>overwrite</code>	overwrite files if we find identical models, Default: FALSE

**Details**

the cloud version of the ingest process, depreciated in favor of local pre-RRASSL

**Value**

a set of files in a newly RRASSLE'd record.

**See Also**

[str\\_sub](#), [str\\_detect](#) [get\\_bucket](#), [delete\\_object](#), [put\\_object](#) [glue](#) [glob2rx](#) [st\\_crs](#), [st\\_coordinates](#), [geos\\_unary](#), [st\\_write](#) [select](#), [pull](#) [data.table](#)-[package](#), [fwrite](#) [sf\\_linestring](#), [sf\\_polygon](#) [st\\_startpoint](#) [get\\_nhdplus](#) [aoi\\_get](#) [write\\_parquet](#)

Other ingest: [disk\\_ingest\\_record\(\)](#), [ingest\\_FEMA6\\_BLE\(\)](#), [ingest\\_into\\_database\(\)](#)

**Examples**

```
## Not run:
if(interactive()){
  #EXAMPLE1
}

## End(Not run)
```

---

```
crosswalk_hull_to_hydrofabric_value
  crosswalk_hull_to_hydrofabric_value
```

---

**Description**

crosswalk\_hull\_to\_hydrofabric\_value

**Usage**

```
crosswalk_hull_to_hydrofabric_value(hull, river)
```

**Arguments**

hull	the model cross section hulls
river	the river streamlines

**Details**

Used to tie into hydrofabric models

**Value**

The representative COMID from nhdplusTools

**See Also**

[get\\_nhdplus\\_aoi\\_get\\_st\\_transform, st\\_crs](#)

**Examples**

```
## Not run:
if(interactive()){
  #EXAMPLE1
  extrated_pts <- parse_model_to_xyz(geom_path = "./inst/extdata/sample_ras/FEMA-R6-BLE-sample-dataset/12090301/1

hull = sfheaders::sf_polygon(
  obj = df_hull_pts,
  x = "X",
  y = "Y",
  keep = FALSE) |> sf::st_set_crs(sf::st_crs("EPSG:6349"))

river <- extrated_pts[[3]]
current_nhdplus_comid <- crosswalk_hull_to_hydrofabric_value(hull,river)
}

## End(Not run)

```

---

disk\_ingest\_record      *disk\_ingest\_record*

---

## Description

add a file as a record in the RRASLED structure

## Usage

```

disk_ingest_record(
  in_file = NULL,
  path_to_ras_dbase = NULL,
  code_to_place_in_source = NULL,
  proj_override = NULL,
  apply_vdat_trans = FALSE,
  is_quiet = FALSE,
  is_verbose = FALSE,
  overwrite = FALSE
)

```

## Arguments

`in_file`                    the path to the file on disk that we want to ingest, Default: NULL  
`code_to_place_in_source`    a code to place in the metadata as the owner of the model, Default: NULL

proj_override	a string to override projection information should none be found, Default: NULL
apply_vdat_trans	Should VDATUM be applied to the HEC-RAS model geometry. See <a href="https://vdatum.noaa.gov/">https://vdatum.noaa.gov/</a> , Default: FALSE
is_quiet	flag to determine whether print statements are suppressed, TRUE to suppress messages and FALSE to show them, Default: FALSE
is_verbose	flag to determine whether internal print statements (i.e. cross section parsing, vdat trans, file info) are suppressed, TRUE to show these messages and FALSE to suppress them, Default: FALSE
overwrite	overwrite files if we find identical models, Default: FALSE
ras_dbase	A path to a directory to write your RRASSLED catalog to., Default: NULL

### Details

the disk version of the ingest process

### Value

a set of files in a newly RRASSLE'd record.

### See Also

### Examples

```
## Not run:
if(interactive()){
  #EXAMPLE1
  # ras_dbase <- "../inst/extdata/sample_output/ras_catalog/"
  # dir_to_scrape <- "../inst/extdata/sample_ras/FEMA-R6-BLE-sample-dataset/"
  dir_to_scrape <- fs::path_package("extdata/shapes.fgb", package = "mypkg")
  list_of_prj_files <- list.files(dir_to_scrape, pattern = glob2rx("*.prj$"), full.names = TRUE, ignore.case = TRUE, recursive = TRUE)
  disk_ingest_record(in_file = list_of_prj_files[1], path_to_ras_dbase = ras_dbase, code_to_place_in_source = "test")

  #EXAMPLE2
  dir_to_scrape <- "../inst/extdata/sample_ras/ras2fim-sample-dataset/"
  list_of_prj_files <- list.files(dir_to_scrape, pattern = glob2rx("*.prj$"), full.names = TRUE, ignore.case = TRUE, recursive = TRUE)
  disk_ingest_record(in_file = list_of_prj_files[1], path_to_ras_dbase = ras_dbase, code_to_place_in_source = "test")
}

## End(Not run)
```

---

get\_datum\_from\_crs     *get\_datum\_from\_crs*

---

### Description

attempts to parse datum and datum unit from file based on WKT

### Usage

```
get_datum_from_crs(x)
```

### Arguments

x                    either the string or the sf crs

### Details

DETAILS

### Value

list of CRS and vertical unit

### See Also

[st\_crs][sf::st\_crs]

### Examples

```
## Not run:
if(interactive()){
  #EXAMPLE1
  get_datum_from_crs("EPSG:6349")

  EXAMPLE2
  get_datum_from_crs(sf::st_crs("EPSG:6349"))
}

## End(Not run)
```

---

ingest\_FEMA6\_BLE      *ingest\_FEMA6\_BLE*

---

**Description**

helper to ingest FEMA region 6 BLE data

**Usage**

```
ingest_FEMA6_BLE(
  path_to_ras_dbase,
  HUCID,
  proj_override = NULL,
  apply_vdat_trans = FALSE,
  is_quiet = FALSE,
  is_verbose = TRUE,
  overwrite = FALSE,
  parallel_proc = TRUE,
  free_treads = 2,
  clean = FALSE,
  opt_local_path = NULL
)
```

**Arguments**

- path\_to\_ras\_dbase      The path to the folder in which you are building your catalog, Default: NULL
- HUCID                  string to huc8
- proj\_override        a CRS string to apply should a projection not be found, Default: NULL
- apply\_vdat\_trans     a flag to dictate whether or not to apply a vdatum transformation, TRUE to apply, FALSE to skip, Default: FALSE
- is\_quiet              flag to determine whether print statements are suppressed, TRUE to suppress messages and FALSE to show them, Default: FALSE
- is\_verbose            flag to determine whether internal print statements (i.e. cross section parsing, vdat trans, file info) are suppressed, TRUE to show these messages and FALSE to suppress them, Default: TRUE
- overwrite             overwrite files if we find identical models, Default: FALSE
- parallel\_proc        Flag to determine if this should this parallel process, will check for enough free cores and boot this back if it exceeds available resources. Will suppress all intermediate messages if active, Default: TRUE
- free\_treads          number of threads to leave free if parallel processing, Default: 2
- clean                 number of threads to leave free if parallel processing, Default: 2
- opt\_local\_path        PARAM\_DESCRIPTION, Default: NULL

**Details**

As one of the best centralized and accessible databases, the FEMA region 6 BLE data are perfect candidates to RRASSL. This provides a wrapper around BLE scrapers and the `ingest_into_database` function.

**Value**

a RRASSLE'd catalog of models or added desired HUC8 models

**See Also**

[str\\_sub glue unzip st\\_read, st\\_crs](#)

Other ingest: [cloud\\_ingest\\_record\(\)](#), [disk\\_ingest\\_record\(\)](#), [ingest\\_into\\_database\(\)](#)

**Examples**

```
## Not run:
if(interactive()){
  #EXAMPLE1
  RRASSLER::ingest_FEMA6_BLE(path_to_ras_dbase = "G:/data/ras_catalog/", "12090301", proj_override = "EPSG:2277", ap
}
## End(Not run)
```

---

`ingest_into_database` *ingest\_into\_database*

---

**Description**

ingest files from a source directory on your drive into a formatted input directory

**Usage**

```
ingest_into_database(
  path_to_ras_dbase,
  top_of_dir_to_scrape,
  code_to_place_in_source,
  proj_override = NULL,
  apply_vdat_trans = FALSE,
  is_quiet = FALSE,
  is_verbose = FALSE,
  overwrite = FALSE,
  parallel_proc = TRUE,
  free_treads = 2
)
```

**Arguments**

path_to_ras_dbase	A path to a directory to write your RRASSLED directory to. See Methods and Structures for more details. is location agnostic so this can be either a local path or an s3 bucket
top_of_dir_to_scrape	The top of the directory to look for models. Will greedy search and find all models as described in Ingest logic
code_to_place_in_source	a string to place into the model source column. Useful to distinguish data authors
proj_override	a string to override projection information should none be found, Default: NULL
apply_vdat_trans	Should VDATUM be applied to the HEC-RAS model geometry. See <a href="https://vdatum.noaa.gov/">https://vdatum.noaa.gov/</a> , Default: FALSE
is_quiet	flag to determine whether print statements are suppressed, TRUE to suppress messages and FALSE to show them, Default: FALSE
is_verbose	flag to determine whether internal print statements (i.e. cross section parsing, vdat trans, file info) are suppressed, TRUE to show these messages and FALSE to suppress them, Default: FALSE
overwrite	overwrite files if we find identical models, Default: FALSE
parallel_proc	Flag to determine if this should this parallel process, will check for enough free cores and boot this back if it exceeds available resources. Will suppress all intermediate messages if active, Default: TRUE
free_treads	number of threads to leave free if parallel processing, Default: 2

**Details**

here 'ingest' means add to our accounting system and database refers to our folder structure

**Value**

a RRASSLE'd catalog of models

**See Also**

[glue](#) [str\\_sub](#) [detectCores](#), [makeCluster](#) [registerDoParallel](#) [foreach](#)  
Other ingest: [cloud\\_ingest\\_record\(\)](#), [disk\\_ingest\\_record\(\)](#), [ingest\\_FEMA6\\_BLE\(\)](#)

**Examples**

```
## Not run:
if(interactive()){
  #EXAMPLE1
  # ras_dbase <- file.path("~/data/ras_catalog/")
  ras_dbase <- file.path("./inst/extdata/sample_output/ras_catalog/")

  dir_to_scrape <- "./inst/extdata/sample_ras/FEMA-R6-BLE-sample-dataset/"
```

```

RRASSLER::ingest_into_database(path_to_ras_dbase = ras_dbase, top_of_dir_to_scrape = dir_to_scrape, code_to_place

dir_to_scrape <- "../inst/extdata/sample_ras/ras2fim-sample-dataset/input_iowa/"
RRASSLER::ingest_into_database(path_to_ras_dbase = ras_dbase, top_of_dir_to_scrape = dir_to_scrape, code_to_place

}

## End(Not run)

```

---

load\_catalog\_csv\_as\_DT

*load\_catalog\_csv\_as\_DT*

---

## Description

Helper to ensure catalog edge cases and incorrect formats are correctly handled (most commonly numeric strings parsed into characters)

## Usage

```
load_catalog_csv_as_DT(path_to_csv, is_quiet = TRUE)
```

## Arguments

path_to_csv	path to the model_catalog.csv file under your catalog folder
is_quiet	if TRUE, function will suppress message, Default: TRUE

## Details

a little utility that sets column types on load for some of our sillier edge cases. the vector applied is `'data.table::fread(path_to_csv,colClasses = c("nhdplus_comid" = "character","model_name" = "character","units" = "character","crs" = "character","final_name_key" = "character"))'`

## Value

returns the model\_catalog as a data.table object with enforced column types

## See Also

[fread](#)

map\_library

*map\_library*

---

**Description**

a function to help apply geographic context to the RRASLED catalog

**Usage**

```
map_library(
  path_to_ras_dbase,
  AOI_to_map = NULL,
  name = "model_map",
  plot_lines = FALSE,
  chart_lines = FALSE,
  refresh = FALSE,
  quiet = TRUE
)
```

**Arguments**

path_to_ras_dbase	The path to the folder in which you are building your catalog, Default: NULL
AOI_to_map	An AOI pass though to subset the catalog down into a smaller area to add the context too, Default: NULL
name	A name for the map files to create, Default: 'model_map'
plot_lines	draw lines on the map as opposed to just the footprints, Default: FALSE
chart_lines	Add cross section click graphs to the plot lines. Will break if area is too large, Default: FALSE
refresh	flag to dictate whether or not to recollate spatial database prior to mapping. FALSE to skip, TRUE to regenerate, Default: TRUE
quiet	flag to determine whether print statements are suppressed, TRUE to suppress messages and FALSE to show them, Default: FALSE

```

---

marco

*Hello world*

---

**Description**

A hello world tester

**Usage**

```
marco()
```

**Details**

Used to verify that RRASSLER is successfully loaded and test deployment pathways. Copy-paste-d and not drawn from Google (<https://www.asciiart.eu/art-and-design/sculptures>)

**Value**

a hello world message (polo!)

**See Also**

RRASSLER::marco()
```

---

parse\_model\_to\_xyz     *parse\_model\_to\_xyz*

---

### Description

parse a model into an xyz dataframe from basename, considers both g## and g##.hdf files

### Usage

```

parse_model_to_xyz(
  geom_path,
  units,
  proj_string,
  in_epoch_override = as.integer(as.POSIXct(Sys.time())),
  out_epoch_override = as.integer(as.POSIXct(Sys.time())),
  vdat_trans = FALSE,
  quiet = FALSE,
  is_verbose = TRUE
)

```

### Arguments

geom_path	path to the base model
units	units found in the project, "English Units" or "SI Units"
proj_string	PARAM_DESCRIPTION
in_epoch_override	PARAM_DESCRIPTION, Default: as.integer(as.POSIXct(Sys.time()))
out_epoch_override	PARAM_DESCRIPTION, Default: as.integer(as.POSIXct(Sys.time()))
vdat_trans	PARAM_DESCRIPTION, Default: FALSE
quiet	flag to determine whether print statements are suppressed, TRUE to suppress messages and FALSE to show them, Default: FALSE
is_verbose	flag to determine whether internal print statements (i.e. cross section parsing, vdat trans, file info) are suppressed, TRUE to show these messages and FALSE to suppress them, Default: TRUE

---

```
print_warning_block  print_warning_block
```

---

**Description**

A warning block helper

**Usage**

```
print_warning_block()
```

**Details**

line art to draw eyes to printing notices

**Value**

print output

**See Also**

Other helper: [load\\_catalog\\_csv\\_as\\_DT\(\)](#), [marco\(\)](#), [print\\_error\\_block\(\)](#), [url\\_exists\(\)](#), [util\\_unzip\(\)](#)

**Examples**

```
RRASSLER::print_warning_block()
```

---

```
process_ras_g_to_xyz  process_ras_g_to_xyz
```

---

**Description**

process a ras g file into xyz format

**Usage**

```
process_ras_g_to_xyz(
  geom_path,
  units,
  proj_string,
  in_epoch_override = as.integer(as.POSIXct(Sys.time())),
  out_epoch_override = as.integer(as.POSIXct(Sys.time())),
  vdat = FALSE,
  quiet = FALSE
)
```

**Arguments**

geom_path	path to a file to parse
units	units found in the project, "English Units" or "SI Units"
proj_string	a projection string to apply
in_epoch_override	vdatum parameter input epoch, Default: as.integer(as.POSIXct(Sys.time()))
out_epoch_override	vdatum parameter output epoch, Default: as.integer(as.POSIXct(Sys.time()))
vdat	a flag to dictate whether or not to apply a vdatum transformation, TRUE to apply, FALSE to skip, Default: FALSE, Default: FALSE
quiet	flag to determine whether print statements are suppressed, TRUE to suppress messages and FALSE to show them, Default: FALSE

**Details**

DETAILS

**Value**

a point database and notes about processing

**See Also**

```

---

process\_ras\_hdf\_to\_xyz

*process\_ras\_hdf\_to\_xyz*

---

**Description**

process a ras g##.hdf file into xyz format

**Usage**

```
process_ras_hdf_to_xyz(
  geom_path,
  units,
  proj_string,
  in_epoch_override = as.integer(as.POSIXct(Sys.time())),
  out_epoch_override = as.integer(as.POSIXct(Sys.time())),
  vdat = FALSE,
  quiet = FALSE
)
```

**Arguments**

geom_path	path to a file to parse
units	units found in the project, "English Units" or "SI Units"
proj_string	a projection string to apply
in_epoch_override	vdatum parameter input epoch, Default: as.integer(as.POSIXct(Sys.time()))
out_epoch_override	vdatum parameter output epoch, Default: as.integer(as.POSIXct(Sys.time()))
vdat	a flag to dictate whether or not to apply a vdatum transformation, TRUE to apply, FALSE to skip, Default: FALSE
quiet	flag to determine whether print statements are suppressed, TRUE to suppress messages and FALSE to show them, Default: FALSE

```

---

refresh\_master\_files    *refresh\_master\_files*

---

### Description

remerge individual files into spatial model key

### Usage

```
refresh_master_files(path_to_ras_dbase, is_verbose = TRUE, overwrite = TRUE)
```

### Arguments

path_to_ras_dbase	The path to the folder in which you are building your catalog, is also location agnostic (disk or cloud), Default: NULL
is_verbose	flag to determine whether print statements are shown - TRUE to show messages - FALSE to skip non-critical ones, Default: TRUE
overwrite	flag to determine whether the catalog is either overwritten (overwrite = TRUE), or a duplicated catalog is copied and appended with the date (overwrite = FALSE) as requested [here]( <a href="https://github.com/NOAA-OWP/RRASSLER/issues/6">https://github.com/NOAA-OWP/RRASSLER/issues/6</a> ), Default: TRUE

### Details

TRUE

### Value

updated master index files including accounting.csv, point\_database.parquet, XS.fgb, and model\_footprints.fgb

### See Also

[str\\_sub](#), [get\\_bucket](#), [get\\_object](#), [delete\\_object](#), [put\\_object](#) as [data.table](#), [fwrite](#), [rbindlist](#), [read\\_delim](#), [glob2rx](#), [glue](#), [st\\_read](#), [st\\_crs](#), [st\\_write](#), [read\\_parquet](#), [write\\_parquet](#), [sf\\_linestring](#)

Other post-process: [append\\_catalog\\_fields\(\)](#)

**Examples**

```
## Not run:
if(interactive()){
  # ras_dbase <- file.path("~/data/ras_catalog/")
  ras_dbase <- file.path("./inst/extdata/sample_output/ras_catalog/")

  RRASSLER::refresh_master_files(path_to_ras_dbase = ras_dbase, is_verbose = TRUE)

  RRASSLER::refresh_master_files(path_to_ras_dbase = "s3://ras-models/", is_verbose = TRUE, overwrite = FALSE)
}

## End(Not run)
```

---

scrape\_ble\_lib

*FEMA region 6 BLE data scraper*

---

**Description**

Helper to download relevant BLE data

**Usage**

```
scrape_ble_lib(
  database_path,
  HUCID,
  is_quiet = FALSE,
  overwrite = overwrite,
  files = "m"
)
```

**Arguments**

database_path	Path to load data into. NOTE: Must be LOCAL path
HUCID	The huc8 ID as a string to try and scrape
is_quiet	flag to determine whether print statements are suppressed, TRUE to suppress messages and FALSE to show them, Default: FALSE
overwrite	overwrite flag for data already loaded in your path. TRUE to remove and re-download., Default: overwrite
files	a string encoding to determine what files to attempt to download, can contain 'm' for models, 's' for spatial data, and 'd' for documentation, Default: 'm'

**Details**

Scraping data from <https://ebfedata.s3.amazonaws.com/> based on pointers from <https://webapps.usgs.gov/infrm/estBFE/>. See also the Texas specific dashboard at <https://www.arcgis.com/apps/dashboards/1e98f1e511fc40d3b08790a4251a64ee> for more BLE base models.

**Value**

The requested BLE data as a scraped zip file

**See Also**

[st\\_transform](#), [st\\_read](#), [st\\_crs](#) GET, [write\\_disk](#) glue

**Examples**

```
## Not run:
if(interactive()){
  #EXAMPLE1
  database_path <- file.path("~/data/ras_catalog/")
  RRASSLER::scrape_ble_lib(database_path, '12090301', is_quiet = FALSE, overwrite = FALSE, files = "ms")
}

## End(Not run)
```

---

url\_exists

*URL tester*

---

**Description**

A function to test if I get a response from a URL

**Usage**

```
url_exists(x, non_2xx_return_value = FALSE, is_quiet = FALSE)
```

**Arguments**

x	the URL to test
non_2xx_return_value	PARAM_DESCRIPTION, Default: FALSE
is_quiet	flag to determine whether print statements are suppressed, TRUE to suppress messages and FALSE to show them, Default: FALSE

**Details**

gratefully pilfered from <https://stackoverflow.com/questions/52911812/check-if-url-exists-in-r>

**Value**

returns TRUE if the url exists

**See Also**

[HEAD](#), [GET](#), [status\\_code](#)

Other helper: [load\\_catalog\\_csv\\_as\\_DT\(\)](#), [marco\(\)](#), [print\\_error\\_block\(\)](#), [print\\_warning\\_block\(\)](#), [util\\_unzip\(\)](#)

```
#EXAMPLE1
some_urls <-
c(
  "https://jimcoll.github.io/a/bad/programmer/", # Should 404
  "https://github.com/NOAA-OWP/inundation-mapping", # Should exist
  "https://nooneshouldeverhavethisurl.gov/badtest" # Does not exist in any form
)
data.frame(
  exists = sapply(some_urls, url_exists, USE.NAMES = FALSE),
  some_urls,
  stringsAsFactors = FALSE
) %>% tibble::as_tibble() %>% print()
```

---

util\_g\_to\_geom\_pts      *util\_g\_to\_geom\_pts*

---

**Description**

A wrapper of a few different utilities across rasser to read files in directly as points

**Usage**

```
util_g_to_geom_pts(geom_path, units, proj_string, quiet = FALSE)
```

**Arguments**

geom_path	path to a file to parse
units	units found in the project, "English Units" or "SI Units"
proj_string	a projection string to apply
quiet	flag to determine whether print statements are suppressed, TRUE to suppress messages and FALSE to show them, Default: FALSE

**Details**

DETAILS

**Value**

sf points

}  
  
## End(Not run)
```

---

util\_unzip

*unzip nested folders*

---

**Description**

unzips nested zip files

**Usage**

```
util_unzip(zippath, is_quiet = FALSE)
```

**Arguments**

zippath	path to zip
is_quiet	flag to determine whether print statements are suppressed, TRUE to suppress messages and FALSE to show them, Default: FALSE

**Details**

DETAILS

**Value**

unzipped dir

**See Also**

[str\\_sub](#) [unzip](#) [glue](#) [setops](#)

Other helper: [load\\_catalog\\_csv\\_as\\_DT\(\)](#), [marco\(\)](#), [print\\_error\\_block\(\)](#), [print\\_warning\\_block\(\)](#),  
[url\\_exists\(\)](#)

**Examples**

```

## Not run:
if(interactive()){
  #EXAMPLE1
  RRASSLER::util_unzip(file.path(database_path,"_temp","BLE",HUCID,glue::glue("{HUCID}_models.zip"),fsep = .Plat
  }

## End(Not run)

```

---

*xs\_to\_transect\_picker xs\_to\_transect\_picker*

---

**Description**

Picks transects

**Usage**

```

xs_to_transect_picker(
  path_to_ras_dbase = NULL,
  line_select_subset = NULL,
  hf_lines,
  reference_divides,
  reference_flowlines,
  existing_transects,
  existing_points,
  overwrite = FALSE,
  is_verbose = TRUE,
  test_limit = NULL
)

```

**Arguments**

<code>path_to_ras_dbase</code>	The path to the folder in which you are building your catalog, Default: NULL
<code>line_select_subset</code>	PARAM_DESCRIPTION, Default: NULL
<code>hf_lines</code>	Hydrofabric lines
<code>reference_divides</code>	reference divide paths
<code>reference_flowlines</code>	reference flowline paths
<code>existing_transects</code>	reference transect paths
<code>existing_points</code>	reference points paths

overwrite	overwrite files if we find identical models, Default: FALSE
is_verbose	flag to determine whether internal print statements (i.e. cross section parsing, vdat trans, file info) are suppressed, TRUE to show these messages and FALSE to suppress them, Default: FALSE
test_limit	Number of transects to use, Default: NULL

**Details**

DETAILS

**Value**

selected HEC-RAS lines in hd3d form

}

## End(Not run)
```

---

xyz\_to\_ls

*xyz\_to\_ls*

---

**Description**

helper to transform points into linestrings

**Usage**

```
xyz_to_ls(dat = NULL, path_to_ras_dbase = NULL, is_quiet = FALSE)
```

**Arguments**

dat	The dataframe of points, Default: NULL
path_to_ras_dbase	The path to the folder in which you are building your catalog, is also location agnostic (disk or cloud), Default: NULL
is_quiet	PARAM_DESCRIPTION, Default: FALSE

**Details**
