

# Package: climateR (via r-universe)

December 5, 2024

**Type** Package

**Title** climateR

**Description** Find, subset, and retrieve geospatial data by AOI.

**Version** 0.3.7

**Maintainer** Mike Johnson <mike.johnson@noaa.gov>

**BugReports** <https://github.com/mikejohnson51/climateR/issues>

**URL** <https://github.com/mikejohnson51/climateR>

**Depends** R(>= 3.5.0)

**Imports** arrow, dplyr, future.apply, glue, gifski, ncmeta, RNetCDF,  
rnz, terra, utils, methods, stats, grDevices

**License** MIT + file LICENSE

**Encoding** UTF-8

**LazyData** true

**RoxygenNote** 7.3.2

**Suggests** httr, AOI, covr, testthat (>= 3.0.0), rmarkdown, knitr,  
kableExtra, distill, ggplot2, patchwork, sf, tidyr, tidyterra,  
reticulate

**Remotes** mikejohnson51/AOI, dblodgett-usgs/ncmeta, DOI-USGS/rnz

**Config/testthat/edition** 3

**VignetteBuilder** knitr

**Config/pak/sysreqs** cmake libgdal-dev gdal-bin libgeos-dev libicu-dev  
libnetcdf-dev libssl-dev libproj-dev libsqlite3-dev  
libudunits2-dev

**Repository** <https://owp-spatial.r-universe.dev>

**RemoteUrl** <https://github.com/mikejohnson51/climateR>

**RemoteRef** HEAD

**RemoteSha** 718a8d0357e9249894fb4f6e922911042db47e79

.resource\_grid      *Extract grid metadata from NC Pointer*

**Description**

Extract grid metadata from NC Pointer

**Usage**

.resource\_grid(URL, X\_name = NULL, Y\_name = NULL, stopIfNotEqualSpaced = TRUE)

**Arguments**

- URL                    location of data to process
- X\_name                Name of X diminsion. If NULL it is found
- Y\_name                Name of Y diminsion. If NULL it is found
- stopIfNotEqualSpaced  
                         stop if not equal space grid

**Value**

list

**See Also**

Other dap: [.resource\\_time\(\)](#), [climater\\_dap\(\)](#), [climater\\_filter\(\)](#), [dap\(\)](#), [dap\\_crop\(\)](#), [dap\\_get\(\)](#), [dap\\_meta\(\)](#), [dap\\_summary\(\)](#), [dap\\_to\\_local\(\)](#), [dap\\_xyzv\(\)](#), [extract\\_sites\(\)](#), [get\\_data\(\)](#), [go\\_get\\_dap\\_data\(\)](#), [grid\\_meta\(\)](#), [make\\_ext\(\)](#), [make\\_vect\(\)](#), [merge\\_across\\_time\(\)](#), [parse\\_date\(\)](#), [read\\_dap\\_file\(\)](#), [read\\_ftp\(\)](#), [time\\_meta\(\)](#), [try\\_att\(\)](#), [var\\_to\\_terra\(\)](#), [variable\\_meta\(\)](#), [vrt\\_crop\\_get\(\)](#)

---

*.resource\_grid\_zarr*     *Extract Grid Information from Zarr Resource*

---

**Description**

Retrieves grid dimension metadata and calculates grid properties.

**Usage**

```
.resource_grid_zarr(  
  URL,  
  X_name = NULL,  
  Y_name = NULL,  
  stopIfNotEqualSpaced = TRUE  
)
```

**Arguments**

URL	Character. The URL of the Zarr file.
X_name	Character. Name of the X-coordinate variable. Defaults to NULL.
Y_name	Character. Name of the Y-coordinate variable. Defaults to NULL.
stopIfNotEqualSpaced	Logical. Whether to stop if grid cells are not equally spaced. Defaults to TRUE.

**Value**

A data frame with grid properties.

**See Also**

Other zarr: [.resource\\_time\\_zarr\(\)](#), [go\\_get\\_zarr\(\)](#), [read\\_zarr\\_file\(\)](#), [zarr\\_crop\(\)](#), [zarr\\_get\(\)](#), [zarr\\_to\\_terra\(\)](#), [zarr\\_xyzv\(\)](#)

---

.resource\_time      *Extract time metadata from NC Pointer*

---

**Description**

Extract time metadata from NC Pointer

**Usage**

```
.resource_time(URL, T_name = NULL)
```

**Arguments**

URL                    location of data to process  
T\_name                 Name of T dimension. If NULL it is found

**Value**

list

**See Also**

Other dap: [.resource\\_grid\(\)](#), [climater\\_dap\(\)](#), [climater\\_filter\(\)](#), [dap\(\)](#), [dap\\_crop\(\)](#), [dap\\_get\(\)](#), [dap\\_meta\(\)](#), [dap\\_summary\(\)](#), [dap\\_to\\_local\(\)](#), [dap\\_xyzv\(\)](#), [extract\\_sites\(\)](#), [get\\_data\(\)](#), [go\\_get\\_dap\\_data\(\)](#), [grid\\_meta\(\)](#), [make\\_ext\(\)](#), [make\\_vect\(\)](#), [merge\\_across\\_time\(\)](#), [parse\\_date\(\)](#), [read\\_dap\\_file\(\)](#), [read\\_ftp\(\)](#), [time\\_meta\(\)](#), [try\\_att\(\)](#), [var\\_to\\_terra\(\)](#), [variable\\_meta\(\)](#), [vrt\\_crop\\_get\(\)](#)

---

.resource\_time\_zarr      *Extract Time Information from Zarr Resource*

---

**Description**

Retrieves time dimension metadata and calculates time intervals.

**Usage**

```
.resource_time_zarr(URL, T_name = NULL)
```

**Arguments**

URL                    Character. The URL of the Zarr file.  
T\_name                 Character. Name of the time variable. Defaults to NULL.

**Value**

A list with time duration, interval, and count information.

**See Also**

Other zarr: [.resource\\_grid\\_zarr\(\)](#), [go\\_get\\_zarr\(\)](#), [read\\_zarr\\_file\(\)](#), [zarr\\_crop\(\)](#), [zarr\\_get\(\)](#), [zarr\\_to\\_terra\(\)](#), [zarr\\_xyzv\(\)](#)

---

 animation

*Animate Object as GIF*

---

**Description**

Animate a SpatRaster object as a gif.

**Usage**

```
animation(data, AOI = NULL, feild_pattern = NULL, outfile, colors = blues9)
```

**Arguments**

data	a SpatVect or sf object
AOI	optional AOI sf or SpatVect object to overlay on gif
feild_pattern	optional string vector to filter the desired attributes by
outfile	path to write gif file, must have .gif extenstion
colors	colors to plot with

**Value**

file.path

**See Also**

Other viz: [animation\\_raster\(\)](#), [animation\\_vector\(\)](#)

---

animation_raster	<i>Animate SpatRaster as GIF</i>
------------------	----------------------------------

---

**Description**

Animate a SpatRaster object as a gif.

**Usage**

```
animation_raster(data, AOI = NULL, outfile, colors = blues9)
```

**Arguments**

data	a single SpatRaster object
AOI	optional AOI sf or SpatVect object to overlay on gif
outfile	path to write gif file, must have .gif extension
colors	colors to plot with

**Value**

file.path

**See Also**

Other viz: [animation\(\)](#), [animation\\_vector\(\)](#)

---

animation_vector	<i>Animate vector as GIF</i>
------------------	------------------------------

---

**Description**

Animate a sf or SpatVect object as a gif.

**Usage**

```
animation_vector(data, feild_pattern = NULL, outfile, colors = blues9)
```

**Arguments**

data	a SpatVect or sf object
feild_pattern	optional string vector to filter the desired attributes by
outfile	path to write gif file, must have .gif extension
colors	colors to plot with

**Value**

file.path

**See Also**

Other viz: [animation\(\)](#), [animation\\_raster\(\)](#)

---

catalog

*ClimateR Catalog*

---

**Description**

ClimateR Catalog

**Usage**

```
catalog
```

**Format**

An object of class `tbl_df` (inherits from `tbl`, `data.frame`) with 112398 rows and 29 columns.

**See Also**

Other catalog: [read\\_live\\_catalog\(\)](#)

---

checkDodsrc

*Check dodsrc file*

---

**Description**

Check that there is a netrc file with a valid entry for `urs.earthdata.nasa.gov`.

**Usage**

```
checkDodsrc(dodsrcFile = getDodsrcPath(), netrcFile = getNetrcPath())
```

**Arguments**

`dodsrcFile` File path to dodsrc file to check.

`netrcFile` File path to netrc file to check.

**Value**

logical

**See Also**

Other netrc: [checkNetrc\(\)](#), [getDodsrcPath\(\)](#), [getNetrcPath\(\)](#), [writeDodsrc\(\)](#), [writeNetrc\(\)](#)

---

checkNetrc	<i>Check netrc file</i>
------------	-------------------------

---

**Description**

Check that there is a netrc file with a valid entry for urs.earthdata.nasa.gov.

**Usage**

```
checkNetrc(netrcFile = getNetrcPath(), machine = "urs.earthdata.nasa.gov")
```

**Arguments**

netrcFile	A character. File path to netrc file to check.
machine	the machine you are logging into

**Value**

logical

**See Also**

Other netrc: [checkDodsrc\(\)](#), [getDodsrcPath\(\)](#), [getNetrcPath\(\)](#), [writeDodsrc\(\)](#), [writeNetrc\(\)](#)

---

climater_dap	<i>ClimateR dry run</i>
--------------	-------------------------

---

**Description**

ClimateR dry run

**Usage**

```
climater_dap(id, args, verbose, dryrun, print.arg = FALSE)
```

**Arguments**

id	The resource name, agency, or catalog identifier
args	The parent function arguments
verbose	Should messages be emitted?
dryrun	Return summary of data prior to retrieving it
print.arg	should arguments be printed? Usefull for debugging

**Value**

data.frame

**See Also**

Other dap: [.resource\\_grid\(\)](#), [.resource\\_time\(\)](#), [climater\\_filter\(\)](#), [dap\(\)](#), [dap\\_crop\(\)](#), [dap\\_get\(\)](#), [dap\\_meta\(\)](#), [dap\\_summary\(\)](#), [dap\\_to\\_local\(\)](#), [dap\\_xyzv\(\)](#), [extract\\_sites\(\)](#), [get\\_data\(\)](#), [go\\_get\\_dap\\_data\(\)](#), [grid\\_meta\(\)](#), [make\\_ext\(\)](#), [make\\_vect\(\)](#), [merge\\_across\\_time\(\)](#), [parse\\_date\(\)](#), [read\\_dap\\_file\(\)](#), [read\\_ftp\(\)](#), [time\\_meta\(\)](#), [try\\_att\(\)](#), [var\\_to\\_terra\(\)](#), [variable\\_meta\(\)](#), [vrt\\_crop\\_get\(\)](#)

---

climater_filter	<i>ClimateR Catalog Filter</i>
-----------------	--------------------------------

---

**Description**

Filter the climateR catalog based on a set of constraints

**Usage**

```
climater_filter(
  id = NULL,
  asset = NULL,
  AOI = NULL,
  startDate = NULL,
  endDate = NULL,
  varname = NULL,
  model = NULL,
  scenario = NULL,
  ensemble = NULL
)
```

**Arguments**

id	The resource, agency, or catalog identifier
asset	The subdataset or asset in a given resource
AOI	an sf of SpatVect point or polygon to extract data for
startDate	a start date given as "YYYY-MM-DD" to extract data for
endDate	an end date given as "YYYY-MM-DD" to extract data for
varname	variable name to extract (e.g. tmin)
model	GCM model name generating
scenario	A climate or modeling scenario
ensemble	The model ensemble member used to generate data

**Value**

data.frame

**See Also**

Other dap: [.resource\\_grid\(\)](#), [.resource\\_time\(\)](#), [climater\\_dap\(\)](#), [dap\(\)](#), [dap\\_crop\(\)](#), [dap\\_get\(\)](#), [dap\\_meta\(\)](#), [dap\\_summary\(\)](#), [dap\\_to\\_local\(\)](#), [dap\\_xyzv\(\)](#), [extract\\_sites\(\)](#), [get\\_data\(\)](#), [go\\_get\\_dap\\_data\(\)](#), [grid\\_meta\(\)](#), [make\\_ext\(\)](#), [make\\_vect\(\)](#), [merge\\_across\\_time\(\)](#), [parse\\_date\(\)](#), [read\\_dap\\_file\(\)](#), [read\\_ftp\(\)](#), [time\\_meta\(\)](#), [try\\_att\(\)](#), [var\\_to\\_terra\(\)](#), [variable\\_meta\(\)](#), [vrt\\_crop\\_get\(\)](#)

---

dap	<i>Get Data (Data Access Protocol)</i>
-----	--

---

**Description**

this function provides a consistent data access protocol (dap) to a wide range of local and remote resources including VRT, TDS, NetCDF

Define and get data from a DAP resource

**Usage**

```
dap(
  URL = NULL,
  catalog = NULL,
  AOI = NULL,
  startDate = NULL,
  endDate = NULL,
  varname = NULL,
  grid = NULL,
  start = NULL,
  end = NULL,
  toptobottom = FALSE,
  ID = NULL,
  verbose = TRUE
)
```

**Arguments**

URL	local file path or URL
catalog	subset of open.dap catalog
AOI	an sf of SpatVect point or polygon to extract data for
startDate	a start date given as "YYYY-MM-DD" to extract data for
endDate	an end date given as "YYYY-MM-DD" to extract data for
varname	variable name to extract (e.g. tmin)

grid	a list containing an extent (), and crs
start	for non "dated" items, start can be called by index
end	for non "dated" items, end can be called by index
toptobottom	should data be inverse?
ID	a column of unique identifiers
verbose	Should dap_summary be printed?

### Details

Wraps `dap_get` and `dap_crop` into one. If AOI is NULL no spatial crop is executed. If startDate AND endDate are NULL, no temporal crop is executed. If just endDate is NULL it defaults to the startDate.

### Value

data.frame

### See Also

Other dap: [.resource\\_grid\(\)](#), [.resource\\_time\(\)](#), [climater\\_dap\(\)](#), [climater\\_filter\(\)](#), [dap\\_crop\(\)](#), [dap\\_get\(\)](#), [dap\\_meta\(\)](#), [dap\\_summary\(\)](#), [dap\\_to\\_local\(\)](#), [dap\\_xyzv\(\)](#), [extract\\_sites\(\)](#), [get\\_data\(\)](#), [go\\_get\\_dap\\_data\(\)](#), [grid\\_meta\(\)](#), [make\\_ext\(\)](#), [make\\_vect\(\)](#), [merge\\_across\\_time\(\)](#), [parse\\_date\(\)](#), [read\\_dap\\_file\(\)](#), [read\\_ftp\(\)](#), [time\\_meta\(\)](#), [try\\_att\(\)](#), [var\\_to\\_terra\(\)](#), [variable\\_meta\(\)](#), [vrt\\_crop\\_get\(\)](#)

---

dap\_crop

*Crop DAP file*

---

### Description

Crop DAP file

### Usage

```
dap_crop(
  URL = NULL,
  catalog = NULL,
  AOI = NULL,
  startDate = NULL,
  endDate = NULL,
  start = NULL,
  end = NULL,
  varname = NULL,
  verbose = TRUE
)
```

**Arguments**

URL	local file path or URL
catalog	subset of open.dap catalog
AOI	an sf of SpatVect point or polygon to extract data for
startDate	a start date given as "YYYY-MM-DD" to extract data for
endDate	an end date given as "YYYY-MM-DD" to extract data for
start	for non "dated" items, start can be called by index
end	for non "dated" items, end can be called by index
varname	variable name to extract (e.g. tmin)
verbose	Should dap_summary be printed?

**Value**

data.frame

**See Also**

Other dap: [.resource\\_grid\(\)](#), [.resource\\_time\(\)](#), [climater\\_dap\(\)](#), [climater\\_filter\(\)](#), [dap\(\)](#), [dap\\_get\(\)](#), [dap\\_meta\(\)](#), [dap\\_summary\(\)](#), [dap\\_to\\_local\(\)](#), [dap\\_xyzv\(\)](#), [extract\\_sites\(\)](#), [get\\_data\(\)](#), [go\\_get\\_dap\\_data\(\)](#), [grid\\_meta\(\)](#), [make\\_ext\(\)](#), [make\\_vect\(\)](#), [merge\\_across\\_time\(\)](#), [parse\\_date\(\)](#), [read\\_dap\\_file\(\)](#), [read\\_ftp\(\)](#), [time\\_meta\(\)](#), [try\\_att\(\)](#), [var\\_to\\_terra\(\)](#), [variable\\_meta\(\)](#), [vrt\\_crop\\_get\(\)](#)

---

dap\_get

*Get DAP resource data*

---

**Description**

Get DAP resource data

**Usage**

```
dap_get(dap, varname = NULL)
```

**Arguments**

dap	data.frame from catalog or dap_crop
varname	name of variable to extract. If NULL, then get all

**Value**

SpatRaster

**See Also**

Other dap: [.resource\\_grid\(\)](#), [.resource\\_time\(\)](#), [climater\\_dap\(\)](#), [climater\\_filter\(\)](#), [dap\(\)](#), [dap\\_crop\(\)](#), [dap\\_meta\(\)](#), [dap\\_summary\(\)](#), [dap\\_to\\_local\(\)](#), [dap\\_xyzv\(\)](#), [extract\\_sites\(\)](#), [get\\_data\(\)](#), [go\\_get\\_dap\\_data\(\)](#), [grid\\_meta\(\)](#), [make\\_ext\(\)](#), [make\\_vect\(\)](#), [merge\\_across\\_time\(\)](#), [parse\\_date\(\)](#), [read\\_dap\\_file\(\)](#), [read\\_ftp\(\)](#), [time\\_meta\(\)](#), [try\\_att\(\)](#), [var\\_to\\_terra\(\)](#), [variable\\_meta\(\)](#), [vrt\\_crop\\_get\(\)](#)

---

dap\_meta

*Find DAP Metadata*

---

**Description**

Find DAP Metadata

**Usage**

```
dap_meta(raw)
```

**Arguments**

```
raw          data.frame
```

**Value**

data.frame

**See Also**

Other dap: [.resource\\_grid\(\)](#), [.resource\\_time\(\)](#), [climater\\_dap\(\)](#), [climater\\_filter\(\)](#), [dap\(\)](#), [dap\\_crop\(\)](#), [dap\\_get\(\)](#), [dap\\_summary\(\)](#), [dap\\_to\\_local\(\)](#), [dap\\_xyzv\(\)](#), [extract\\_sites\(\)](#), [get\\_data\(\)](#), [go\\_get\\_dap\\_data\(\)](#), [grid\\_meta\(\)](#), [make\\_ext\(\)](#), [make\\_vect\(\)](#), [merge\\_across\\_time\(\)](#), [parse\\_date\(\)](#), [read\\_dap\\_file\(\)](#), [read\\_ftp\(\)](#), [time\\_meta\(\)](#), [try\\_att\(\)](#), [var\\_to\\_terra\(\)](#), [variable\\_meta\(\)](#), [vrt\\_crop\\_get\(\)](#)

---

dap\_summary

*Print Summary Information About a OpenDAP Resource*

---

**Description**

Print summary information about a DAP summary

**Usage**

```
dap_summary(dap = NULL, url = NULL)
```

**Arguments**

dap	data.frame from catalog or dap_crop
url	Unique Resource Identifier (http or local)

**See Also**

Other dap: [.resource\\_grid\(\)](#), [.resource\\_time\(\)](#), [climater\\_dap\(\)](#), [climater\\_filter\(\)](#), [dap\(\)](#), [dap\\_crop\(\)](#), [dap\\_get\(\)](#), [dap\\_meta\(\)](#), [dap\\_to\\_local\(\)](#), [dap\\_xyzv\(\)](#), [extract\\_sites\(\)](#), [get\\_data\(\)](#), [go\\_get\\_dap\\_data\(\)](#), [grid\\_meta\(\)](#), [make\\_ext\(\)](#), [make\\_vect\(\)](#), [merge\\_across\\_time\(\)](#), [parse\\_date\(\)](#), [read\\_dap\\_file\(\)](#), [read\\_ftp\(\)](#), [time\\_meta\(\)](#), [try\\_att\(\)](#), [var\\_to\\_terra\(\)](#), [variable\\_meta\(\)](#), [vrt\\_crop\\_get\(\)](#)

---

dap_to_local	<i>Convert OpenDAP to start/count call</i>
--------------	--

---

**Description**

Convert OpenDAP to start/count call

**Usage**

```
dap_to_local(dap, get = TRUE)
```

**Arguments**

dap	dap description
get	should data be collected?

**Value**

numeric array

**See Also**

Other dap: [.resource\\_grid\(\)](#), [.resource\\_time\(\)](#), [climater\\_dap\(\)](#), [climater\\_filter\(\)](#), [dap\(\)](#), [dap\\_crop\(\)](#), [dap\\_get\(\)](#), [dap\\_meta\(\)](#), [dap\\_summary\(\)](#), [dap\\_xyzv\(\)](#), [extract\\_sites\(\)](#), [get\\_data\(\)](#), [go\\_get\\_dap\\_data\(\)](#), [grid\\_meta\(\)](#), [make\\_ext\(\)](#), [make\\_vect\(\)](#), [merge\\_across\\_time\(\)](#), [parse\\_date\(\)](#), [read\\_dap\\_file\(\)](#), [read\\_ftp\(\)](#), [time\\_meta\(\)](#), [try\\_att\(\)](#), [var\\_to\\_terra\(\)](#), [variable\\_meta\(\)](#), [vrt\\_crop\\_get\(\)](#)

---

dap_xyzv	<i>Get XYTV data from DAP URL</i>
----------	-----------------------------------

---

**Description**

Get XYTV data from DAP URL

**Usage**

```
dap_xyzv(obj, varname = NULL, varmeta = FALSE)
```

**Arguments**

obj	an OpenDap URL or NetCDF object
varname	name of variable to extract. If NULL, then get all
varmeta	should variable metadata be appended?

**Value**

data.frame with (varname, X\_name, Y\_name, T\_name)

**See Also**

Other dap: [.resource\\_grid\(\)](#), [.resource\\_time\(\)](#), [climater\\_dap\(\)](#), [climater\\_filter\(\)](#), [dap\(\)](#), [dap\\_crop\(\)](#), [dap\\_get\(\)](#), [dap\\_meta\(\)](#), [dap\\_summary\(\)](#), [dap\\_to\\_local\(\)](#), [extract\\_sites\(\)](#), [get\\_data\(\)](#), [go\\_get\\_dap\\_data\(\)](#), [grid\\_meta\(\)](#), [make\\_ext\(\)](#), [make\\_vect\(\)](#), [merge\\_across\\_time\(\)](#), [parse\\_date\(\)](#), [read\\_dap\\_file\(\)](#), [read\\_ftp\(\)](#), [time\\_meta\(\)](#), [try\\_att\(\)](#), [var\\_to\\_terra\(\)](#), [variable\\_meta\(\)](#), [vrt\\_crop\\_get\(\)](#)

---

extract_sites	<i>Extract Sites</i>
---------------	----------------------

---

**Description**

extract timeseries values from a raster stack for a set of points

**Usage**

```
extract_sites(r, pts, ID = NULL)
```

**Arguments**

r	a SpatRaster object
pts	point to extract from
ID	the unique identifier of each point (column name from pts)

**Value**

a data.frame with columns representing points, and rows time periods

**See Also**

 get3DEP

*Get USGS 3DEP DEMs*

---

**Description**

Get USGS 3DEP DEMs

**Usage**

```
get3DEP(AOI, resolution = "30m", ID = NULL)
```

**Arguments**

AOI	an sf of SpatVect point or polygon to extract data for
resolution	DEM resolution (10m or 30m (default))
ID	a column of unique identifiers

**Value**

if AOI is polygon a list of SpatRasters, if AOI is a point then a data.frame of modeled records.

**See Also**

Other shortcuts: [getBCCA\(\)](#), [getCABCM\(\)](#), [getCHIRPS\(\)](#), [getDaymet\(\)](#), [getGLDAS\(\)](#), [getGridMET\(\)](#), [getISRIC\\_soils\(\)](#), [getLCMAP\(\)](#), [getLOCA\(\)](#), [getLOCA\\_hydro\(\)](#), [getLivneh\(\)](#), [getLivneh\\_fluxes\(\)](#), [getMACA\(\)](#), [getMODIS\(\)](#), [getNASADEM\(\)](#), [getNLCD\(\)](#), [getNLDAS\(\)](#), [getPRISM\(\)](#), [getTerraClim\(\)](#), [getTerraClimNormals\(\)](#), [getVIC\(\)](#), [getWorldClim\(\)](#)

getBCCA                      *Get BCCA data*

---

### Description

Get BCCA data

### Usage

```
getBCCA(
  AOI,
  varname,
  model = "CCSM4",
  scenario = "rcp45",
  ensemble = NULL,
  startDate,
  endDate = NULL,
  verbose = FALSE,
  ID = NULL,
  dryrun = FALSE
)
```

### Arguments

AOI	an sf of SpatVect point or polygon to extract data for
varname	variable name to extract (e.g. tmin)
model	GCM model name generating
scenario	A climate or modeling scenario
ensemble	The model ensemble member used to generate data
startDate	a start date given as "YYYY-MM-DD" to extract data for
endDate	an end date given as "YYYY-MM-DD" to extract data for
verbose	Should messages be emitted?
ID	a column of unique identifiers
dryrun	Return summary of data prior to retrieving it

### Value

if AOI is polygon a list of SpatRasters, if AOI is a point then a data.frame of modeled records.

### See Also

Other shortcuts: [get3DEP\(\)](#), [getCABCM\(\)](#), [getCHIRPS\(\)](#), [getDaymet\(\)](#), [getGLDAS\(\)](#), [getGridMET\(\)](#), [getISRIC\\_soils\(\)](#), [getLCMAP\(\)](#), [getLOCA\(\)](#), [getLOCA\\_hydro\(\)](#), [getLivneh\(\)](#), [getLivneh\\_fluxes\(\)](#), [getMACA\(\)](#), [getMODIS\(\)](#), [getNASADEM\(\)](#), [getNLCD\(\)](#), [getNLDAS\(\)](#), [getPRISM\(\)](#), [getTerraClim\(\)](#), [getTerraClimNormals\(\)](#), [getVIC\(\)](#), [getWorldClim\(\)](#)

---

getCABCM	<i>Get California Basin Characterization Model (CABCM) historical and projected climate and hydrology data.</i>
----------	---

---

### Description

The California Basin Characterization Model (CABCM) dataset provides historical and projected climate and hydrology data at a 270 meter resolution, which is relevant for watershed-scale evaluation and planning.

### Usage

```
getCABCM(
  AOI = NULL,
  varname = NULL,
  model = "CNRM",
  scenario = NULL,
  startDate,
  endDate = NULL,
  verbose = FALSE,
  ID = NULL,
  dryrun = FALSE
)
```

### Arguments

AOI	an sf of SpatVect point or polygon to extract data for
varname	variable name to extract (e.g. tmin)
model	GCM model name generating
scenario	A climate or modeling scenario
startDate	a start date given as "YYYY-MM-DD" to extract data for
endDate	an end date given as "YYYY-MM-DD" to extract data for
verbose	Should messages be emitted?
ID	a column of unique identifiers
dryrun	Return summary of data prior to retrieving it

### Value

if AOI is polygon a list of SpatRasters, if AOI is a point then a data.frame of modeled records.

### See Also

Other shortcuts: [get3DEP\(\)](#), [getBCCA\(\)](#), [getCHIRPS\(\)](#), [getDaymet\(\)](#), [getGLDAS\(\)](#), [getGridMET\(\)](#), [getISRIC\\_soils\(\)](#), [getLCMAP\(\)](#), [getLOCA\(\)](#), [getLOCA\\_hydro\(\)](#), [getLivneh\(\)](#), [getLivneh\\_fluxes\(\)](#), [getMACA\(\)](#), [getMODIS\(\)](#), [getNASADEM\(\)](#), [getNLCD\(\)](#), [getNLDAS\(\)](#), [getPRISM\(\)](#), [getTerraClim\(\)](#), [getTerraClimNormals\(\)](#), [getVIC\(\)](#), [getWorldClim\(\)](#)

---

getCHIRPS

*Get CHIRPS data*

---

### Description

Get CHIRPS data

### Usage

```
getCHIRPS(
  AOI,
  varname = NULL,
  timeRes = "daily",
  startDate,
  endDate = NULL,
  verbose = FALSE,
  ID = NULL,
  dryrun = FALSE
)
```

### Arguments

AOI	an sf of SpatVect point or polygon to extract data for
varname	variable name to extract (e.g. tmin)
timeRes	"Pentad", "Annual", "Daily" (default), or "Monthly"
startDate	a start date given as "YYYY-MM-DD" to extract data for
endDate	an end date given as "YYYY-MM-DD" to extract data for
verbose	Should messages be emitted?
ID	a column of unique identifiers
dryrun	Return summary of data prior to retrieving it

### Value

if AOI is polygon a list of SpatRasters, if AOI is a point then a data.frame of modeled records.

### See Also

Other shortcuts: [get3DEP\(\)](#), [getBCCA\(\)](#), [getCABCM\(\)](#), [getDaymet\(\)](#), [getGLDAS\(\)](#), [getGridMET\(\)](#), [getISRIC\\_soils\(\)](#), [getLCMAP\(\)](#), [getLOCA\(\)](#), [getLOCA\\_hydro\(\)](#), [getLivneh\(\)](#), [getLivneh\\_fluxes\(\)](#), [getMACA\(\)](#), [getMODIS\(\)](#), [getNASADEM\(\)](#), [getNLCD\(\)](#), [getNLDAS\(\)](#), [getPRISM\(\)](#), [getTerraClim\(\)](#), [getTerraClimNormals\(\)](#), [getVIC\(\)](#), [getWorldClim\(\)](#)

`getDaymet`*Get Daymet Climate Data for an Area of Interest*

---

## Description

This dataset provides Daymet Version 4 model output data as gridded estimates of daily weather parameters for North America. Daymet output variables include the following parameters: minimum temperature, maximum temperature, precipitation, shortwave radiation, vapor pressure, snow water equivalent, and day length. The dataset covers the period from January 1, 1980 to December 31 of the most recent full calendar year. Each subsequent year is processed individually at the close of a calendar year after allowing adequate time for input weather station data to be of archive quality. Daymet variables are continuous surfaces provided as individual files, by year, at a 1-km x 1-km spatial resolution and a daily temporal resolution. Data are in a Lambert Conformal Conic projection for North America and are in a netCDF file format compliant with Climate and Forecast (CF) metadata conventions.

## Usage

```
getDaymet(  
  AOI,  
  varname = NULL,  
  startDate = NULL,  
  endDate = NULL,  
  verbose = FALSE,  
  ID = NULL,  
  dryrun = FALSE  
)
```

## Arguments

AOI	an sf of SpatVect point or polygon to extract data for
varname	variable name to extract (e.g. tmin)
startDate	a start date given as "YYYY-MM-DD" to extract data for
endDate	an end date given as "YYYY-MM-DD" to extract data for
verbose	Should messages be emitted?
ID	a column of unique identifiers
dryrun	Return summary of data prior to retrieving it

## Value

if AOI is polygon a list of SpatRasters, if AOI is a point then a data.frame of modeled records.

**See Also**

Other shortcuts: [get3DEP\(\)](#), [getBCCA\(\)](#), [getCABCM\(\)](#), [getCHIRPS\(\)](#), [getGLDAS\(\)](#), [getGridMET\(\)](#), [getISRIC\\_soils\(\)](#), [getLCMAP\(\)](#), [getLOCA\(\)](#), [getLOCA\\_hydro\(\)](#), [getLivneh\(\)](#), [getLivneh\\_fluxes\(\)](#), [getMACA\(\)](#), [getMODIS\(\)](#), [getNASADEM\(\)](#), [getNLCD\(\)](#), [getNLDAS\(\)](#), [getPRISM\(\)](#), [getTerraClim\(\)](#), [getTerraClimNormals\(\)](#), [getVIC\(\)](#), [getWorldClim\(\)](#)

---

getDodsrcPath	<i>Get a default dodsrc file path</i>
---------------	---------------------------------------

---

**Description**

Get a default dodsrc file path

**Usage**

```
getDodsrcPath()
```

**Value**

A character vector containing the default netrc file path

**See Also**

Other netrc: [checkDodsrc\(\)](#), [checkNetrc\(\)](#), [getNetrcPath\(\)](#), [writeDodsrc\(\)](#), [writeNetrc\(\)](#)

**Examples**

```
getDodsrcPath()
```

---

getGLDAS	<i>Get GLDAS data</i>
----------	-----------------------

---

**Description**

Get GLDAS data

**Usage**

```
getGLDAS(
  AOI,
  varname = NULL,
  model = NULL,
  startDate,
  endDate = NULL,
  verbose = FALSE,
  ID = NULL,
  dryrun = FALSE
)
```

**Arguments**

AOI	an sf of SpatVect point or polygon to extract data for
varname	variable name to extract (e.g. tmin)
model	GCM model name generating
startDate	a start date given as "YYYY-MM-DD" to extract data for
endDate	an end date given as "YYYY-MM-DD" to extract data for
verbose	Should messages be emitted?
ID	a column of unique identifiers
dryrun	Return summary of data prior to retrieving it

**Value**

if AOI is polygon a list of SpatRasters, if AOI is a point then a data.frame of modeled records.

**See Also**

---

getGridMET

*Get GridMet Climate Data for an Area of Interest*

---

**Description**

gridMET is a dataset of daily high-spatial resolution (~4-km, 1/24th degree) surface meteorological data covering the contiguous US from 1979-yesterday. These data are updated daily.

**Usage**

```
getGridMET(
  AOI,
  varname,
  startDate,
  endDate = NULL,
  verbose = FALSE,
  ID = NULL,
  dryrun = FALSE
)
```

**Arguments**

AOI	an sf of SpatVect point or polygon to extract data for
varname	variable name to extract (e.g. tmin)
startDate	a start date given as "YYYY-MM-DD" to extract data for
endDate	an end date given as "YYYY-MM-DD" to extract data for
verbose	Should messages be emitted?
ID	a column of unique identifiers
dryrun	Return summary of data prior to retrieving it

**Value**

if AOI is polygon a list of SpatRasters, if AOI is a point then a data.frame of modeled records.

**See Also**

Other shortcuts: [get3DEP\(\)](#), [getBCCA\(\)](#), [getCABCM\(\)](#), [getCHIRPS\(\)](#), [getDaymet\(\)](#), [getGLDAS\(\)](#), [getISRIC\\_soils\(\)](#), [getLCMAP\(\)](#), [getLOCA\(\)](#), [getLOCA\\_hydro\(\)](#), [getLivneh\(\)](#), [getLivneh\\_fluxes\(\)](#), [getMACA\(\)](#), [getMODIS\(\)](#), [getNASADEM\(\)](#), [getNLCD\(\)](#), [getNLDAS\(\)](#), [getPRISM\(\)](#), [getTerraClim\(\)](#), [getTerraClimNormals\(\)](#), [getVIC\(\)](#), [getWorldClim\(\)](#)

---

getISRIC_soils	<i>Get World Soil Information gridded weather and climate data for historical (near current) conditions.</i>
----------------	--

---

**Description**

World Soil Information (International Soil Reference and Information Centre) serves the international community with open access global soil data

**Usage**

```
getISRIC_soils(AOI = NULL, varname = NULL, verbose = TRUE, ID = NULL)
```

**Arguments**

AOI	an sf of SpatVect point or polygon to extract data for
varname	variable name to extract (e.g. tmin)
verbose	Should messages be emitted?
ID	a column of unique identifiers

**Value**

if AOI is polygon a list of SpatRasters, if AOI is a point then a data.frame of modeled records.

**See Also**

Other shortcuts: [get3DEP\(\)](#), [getBCCA\(\)](#), [getCABCM\(\)](#), [getCHIRPS\(\)](#), [getDaymet\(\)](#), [getGLDAS\(\)](#), [getGridMET\(\)](#), [getLCMAP\(\)](#), [getLOCA\(\)](#), [getLOCA\\_hydro\(\)](#), [getLivneh\(\)](#), [getLivneh\\_fluxes\(\)](#), [getMACA\(\)](#), [getMODIS\(\)](#), [getNASADEM\(\)](#), [getNLCD\(\)](#), [getNLDAS\(\)](#), [getPRISM\(\)](#), [getTerraClim\(\)](#), [getTerraClimNormals\(\)](#), [getVIC\(\)](#), [getWorldClim\(\)](#)

---

 getLCMAP

*Get USGS LCMAP*

---

**Description**

Land Change Monitoring, Assessment, and Projection

**Usage**

```
getLCMAP(AOI, year = 2019, type = "primary landcover", ID = NULL)
```

**Arguments**

AOI	an sf of SpatVect point or polygon to extract data for
year	Land cover product year 1985 - 2019 (default = 2019)
type	product type (primary landcover (default), secondary landcover, primary confidence, secondary confidence, cover change, change day, change magnitude, model quality, spectral stability, spectral lastchance)
ID	a column of unique identifiers

**Value**

if AOI is polygon a list of SpatRasters, if AOI is a point then a data.frame of modeled records.

**See Also**

Other shortcuts: [get3DEP\(\)](#), [getBCCA\(\)](#), [getCABCM\(\)](#), [getCHIRPS\(\)](#), [getDaymet\(\)](#), [getGLDAS\(\)](#), [getGridMET\(\)](#), [getISRIC\\_soils\(\)](#), [getLOCA\(\)](#), [getLOCA\\_hydro\(\)](#), [getLivneh\(\)](#), [getLivneh\\_fluxes\(\)](#), [getMACA\(\)](#), [getMODIS\(\)](#), [getNASADEM\(\)](#), [getNLCD\(\)](#), [getNLDAS\(\)](#), [getPRISM\(\)](#), [getTerraClim\(\)](#), [getTerraClimNormals\(\)](#), [getVIC\(\)](#), [getWorldClim\(\)](#)

---

 getLivneh

*Get Livneh data*

---

### Description

Get Livneh data

### Usage

```
getLivneh(
  AOI,
  varname = NULL,
  startDate,
  endDate = NULL,
  timeRes = "daily",
  verbose = FALSE,
  ID = NULL,
  dryrun = FALSE
)
```

### Arguments

AOI	an sf of SpatVect point or polygon to extract data for
varname	variable name to extract (e.g. tmin)
startDate	a start date given as "YYYY-MM-DD" to extract data for
endDate	an end date given as "YYYY-MM-DD" to extract data for
timeRes	daily or monthly
verbose	Should messages be emitted?
ID	a column of unique identifiers
dryrun	Return summary of data prior to retrieving it

### Value

if AOI is polygon a list of SpatRasters, if AOI is a point then a data.frame of modeled records.

### See Also

Other shortcuts: [get3DEP\(\)](#), [getBCCA\(\)](#), [getCABCM\(\)](#), [getCHIRPS\(\)](#), [getDaymet\(\)](#), [getGLDAS\(\)](#), [getGridMET\(\)](#), [getISRIC\\_soils\(\)](#), [getLCMAP\(\)](#), [getLOCA\(\)](#), [getLOCA\\_hydro\(\)](#), [getLivneh\\_fluxes\(\)](#), [getMACA\(\)](#), [getMODIS\(\)](#), [getNASADEM\(\)](#), [getNLCD\(\)](#), [getNLDAS\(\)](#), [getPRISM\(\)](#), [getTerraClim\(\)](#), [getTerraClimNormals\(\)](#), [getVIC\(\)](#), [getWorldClim\(\)](#)

---

getLivneh_fluxes	<i>Get Livneh Flux data</i>
------------------	-----------------------------

---

## Description

Get Livneh Flux data

## Usage

```
getLivneh_fluxes(  
  AOI,  
  varname = NULL,  
  startDate,  
  endDate = NULL,  
  verbose = FALSE,  
  ID = NULL,  
  dryrun = FALSE  
)
```

## Arguments

AOI	an sf of SpatVect point or polygon to extract data for
varname	variable name to extract (e.g. tmin)
startDate	a start date given as "YYYY-MM-DD" to extract data for
endDate	an end date given as "YYYY-MM-DD" to extract data for
verbose	Should messages be emitted?
ID	a column of unique identifiers
dryrun	Return summary of data prior to retrieving it

## Value

if AOI is polygon a list of SpatRasters, if AOI is a point then a data.frame of modeled records.

## See Also

Other shortcuts: [get3DEP\(\)](#), [getBCCA\(\)](#), [getCABCM\(\)](#), [getCHIRPS\(\)](#), [getDaymet\(\)](#), [getGLDAS\(\)](#), [getGridMET\(\)](#), [getISRIC\\_soils\(\)](#), [getLCMAP\(\)](#), [getLOCA\(\)](#), [getLOCA\\_hydro\(\)](#), [getLivneh\(\)](#), [getMACA\(\)](#), [getMODIS\(\)](#), [getNASADEM\(\)](#), [getNLCD\(\)](#), [getNLDAS\(\)](#), [getPRISM\(\)](#), [getTerraClim\(\)](#), [getTerraClimNormals\(\)](#), [getVIC\(\)](#), [getWorldClim\(\)](#)

---

 getLOCA

*Get LOCA Climate Data for an Area of Interest*

---

### Description

LOCA is a statistical downscaling technique that uses past history to add improved fine-scale detail to global climate models. LOCA has been used to downscale 32 global climate models from the CMIP5 archive at a 1/16th degree spatial resolution, covering North America from central Mexico through Southern Canada. The historical period is 1950-2005, and there are two future scenarios available: RCP 4.5 and RCP 8.5 over the period 2006-2100 (although some models stop in 2099). The variables currently available are daily minimum and maximum temperature, and daily precipitation. For more information visit: <http://loca.ucsd.edu/>.

### Usage

```
getLOCA(
  AOI,
  varname,
  model = "CCSM4",
  scenario = "rcp45",
  startDate,
  endDate = NULL,
  verbose = FALSE,
  ID = NULL,
  dryrun = FALSE
)
```

### Arguments

AOI	an sf of SpatVect point or polygon to extract data for
varname	variable name to extract (e.g. tmin)
model	GCM model name generating
scenario	A climate or modeling scenario
startDate	a start date given as "YYYY-MM-DD" to extract data for
endDate	an end date given as "YYYY-MM-DD" to extract data for
verbose	Should messages be emitted?
ID	a column of unique identifiers
dryrun	Return summary of data prior to retrieving it

### Value

if AOI is polygon a list of SpatRasters, if AOI is a point then a data.frame of modeled records.

**See Also**

Other shortcuts: [get3DEP\(\)](#), [getBCCA\(\)](#), [getCABCM\(\)](#), [getCHIRPS\(\)](#), [getDaymet\(\)](#), [getGLDAS\(\)](#), [getGridMET\(\)](#), [getISRIC\\_soils\(\)](#), [getLCMAP\(\)](#), [getLOCA\\_hydro\(\)](#), [getLivneh\(\)](#), [getLivneh\\_fluxes\(\)](#), [getMACA\(\)](#), [getMODIS\(\)](#), [getNASADEM\(\)](#), [getNLCD\(\)](#), [getNLDAS\(\)](#), [getPRISM\(\)](#), [getTerraClim\(\)](#), [getTerraClimNormals\(\)](#), [getVIC\(\)](#), [getWorldClim\(\)](#)

---

getLOCA\_hydro

*Get LOCA Hydrology data*

---

**Description**

Get LOCA Hydrology data

**Usage**

```
getLOCA_hydro(  
  AOI,  
  varname,  
  model = "CCSM4",  
  scenario = "rcp45",  
  startDate,  
  endDate = NULL,  
  verbose = FALSE,  
  ID = NULL,  
  dryrun = FALSE  
)
```

**Arguments**

AOI	an sf of SpatVect point or polygon to extract data for
varname	variable name to extract (e.g. tmin)
model	GCM model name generating
scenario	A climate or modeling scenario
startDate	a start date given as "YYYY-MM-DD" to extract data for
endDate	an end date given as "YYYY-MM-DD" to extract data for
verbose	Should messages be emitted?
ID	a column of unique identifiers
dryrun	Return summary of data prior to retrieving it

**Value**

if AOI is polygon a list of SpatRasters, if AOI is a point then a data.frame of modeled records.

**See Also**

Other shortcuts: [get3DEP\(\)](#), [getBCCA\(\)](#), [getCABCM\(\)](#), [getCHIRPS\(\)](#), [getDaymet\(\)](#), [getGLDAS\(\)](#), [getGridMET\(\)](#), [getISRIC\\_soils\(\)](#), [getLCMAP\(\)](#), [getLOCA\(\)](#), [getLivneh\(\)](#), [getLivneh\\_fluxes\(\)](#), [getMACA\(\)](#), [getMODIS\(\)](#), [getNASADEM\(\)](#), [getNLCD\(\)](#), [getNLDAS\(\)](#), [getPRISM\(\)](#), [getTerraClim\(\)](#), [getTerraClimNormals\(\)](#), [getVIC\(\)](#), [getWorldClim\(\)](#)

getMACA

*Get MACA Climate Data for an Area of Interest***Description**

Multivariate Adaptive Constructed Analogs (MACA) is a statistical method for downscaling Global Climate Models (GCMs) from their native coarse resolution to a higher spatial resolution that captures reflects observed patterns of daily near-surface meteorology and simulated changes in GCMs experiments.

**Usage**

```
getMACA(
  AOI,
  varname,
  timeRes = "day",
  model = "CCSM4",
  scenario = "rcp45",
  startDate,
  endDate = NULL,
  verbose = FALSE,
  ID = NULL,
  dryrun = FALSE
)
```

**Arguments**

AOI	an sf of SpatVect point or polygon to extract data for
varname	variable name to extract (e.g. tmin)
timeRes	daily or monthly
model	GCM model name generating
scenario	A climate or modeling scenario
startDate	a start date given as "YYYY-MM-DD" to extract data for
endDate	an end date given as "YYYY-MM-DD" to extract data for
verbose	Should messages be emitted?
ID	a column of unique identifiers
dryrun	Return summary of data prior to retrieving it

**Value**

if AOI is polygon a list of SpatRasters, if AOI is a point then a data.frame of modeled records.

**See Also**

Other shortcuts: [get3DEP\(\)](#), [getBCCA\(\)](#), [getCABCM\(\)](#), [getCHIRPS\(\)](#), [getDaymet\(\)](#), [getGLDAS\(\)](#), [getGridMET\(\)](#), [getISRIC\\_soils\(\)](#), [getLCMAP\(\)](#), [getLOCA\(\)](#), [getLOCA\\_hydro\(\)](#), [getLivneh\(\)](#), [getLivneh\\_fluxes\(\)](#), [getMODIS\(\)](#), [getNASADEM\(\)](#), [getNLCD\(\)](#), [getNLDAS\(\)](#), [getPRISM\(\)](#), [getTerraClim\(\)](#), [getTerraClimNormals\(\)](#), [getVIC\(\)](#), [getWorldClim\(\)](#)

---

 getMODIS

*Get MODIS data*

---

**Description**

Get MODIS data

**Usage**

```
getMODIS(
  AOI,
  asset = NULL,
  varname = NULL,
  startDate,
  endDate = NULL,
  verbose = FALSE,
  ID = NULL,
  dryrun = FALSE
)
```

**Arguments**

AOI	an sf of SpatVect point or polygon to extract data for
asset	The MODIS sensor
varname	variable name to extract (e.g. tmin)
startDate	a start date given as "YYYY-MM-DD" to extract data for
endDate	an end date given as "YYYY-MM-DD" to extract data for
verbose	Should messages be emitted?
ID	a column of unique identifiers
dryrun	Return summary of data prior to retrieving it

**Value**

if AOI is polygon a list of SpatRasters, if AOI is a point then a data.frame of modeled records.

**See Also**

Other shortcuts: [get3DEP\(\)](#), [getBCCA\(\)](#), [getCABCM\(\)](#), [getCHIRPS\(\)](#), [getDaymet\(\)](#), [getGLDAS\(\)](#), [getGridMET\(\)](#), [getISRIC\\_soils\(\)](#), [getLCMAP\(\)](#), [getLOCA\(\)](#), [getLOCA\\_hydro\(\)](#), [getLivneh\(\)](#), [getLivneh\\_fluxes\(\)](#), [getMACA\(\)](#), [getNASADEM\(\)](#), [getNLCD\(\)](#), [getNLDAS\(\)](#), [getPRISM\(\)](#), [getTerraClim\(\)](#), [getTerraClimNormals\(\)](#), [getVIC\(\)](#), [getWorldClim\(\)](#)

---

 getNASADEM

*Get NASA Global DEM*

---

**Description**

Get NASA Global DEM

**Usage**

```
getNASADEM(AOI, ID = NULL)
```

**Arguments**

AOI	an sf of SpatVect point or polygon to extract data for
ID	a column of unique identifiers

**Value**

if AOI is polygon a list of SpatRasters, if AOI is a point then a data.frame of modeled records.

**See Also**

Other shortcuts: [get3DEP\(\)](#), [getBCCA\(\)](#), [getCABCM\(\)](#), [getCHIRPS\(\)](#), [getDaymet\(\)](#), [getGLDAS\(\)](#), [getGridMET\(\)](#), [getISRIC\\_soils\(\)](#), [getLCMAP\(\)](#), [getLOCA\(\)](#), [getLOCA\\_hydro\(\)](#), [getLivneh\(\)](#), [getLivneh\\_fluxes\(\)](#), [getMACA\(\)](#), [getMODIS\(\)](#), [getNLCD\(\)](#), [getNLDAS\(\)](#), [getPRISM\(\)](#), [getTerraClim\(\)](#), [getTerraClimNormals\(\)](#), [getVIC\(\)](#), [getWorldClim\(\)](#)

---

 getNetrcPath

*Get the default netrc file path*

---

**Description**

Get a default netrc file path

**Usage**

```
getNetrcPath()
```

**Value**

A character vector containing the default netrc file path

**See Also**

Other netrc: [checkDodsrc\(\)](#), [checkNetrc\(\)](#), [getDodsrcPath\(\)](#), [writeDodsrc\(\)](#), [writeNetrc\(\)](#)

**Examples**

```
getNetrcPath()
```

---

 getNLCD

---

*Get USGS National Land Cover Dataset*

---

**Description**

Get USGS National Land Cover Dataset

**Usage**

```
getNLCD(AOI, year = 2019, type = "land cover", ID = NULL)
```

**Arguments**

AOI	an sf of SpatVect point or polygon to extract data for
year	Landcover product year (2001, 2011,2016,2019)
type	product type
ID	a column of unique identifiers

**Value**

if AOI is polygon a list of SpatRasters, if AOI is a point then a data.frame of modeled records.

**See Also**

Other shortcuts: [get3DEP\(\)](#), [getBCCA\(\)](#), [getCABCM\(\)](#), [getCHIRPS\(\)](#), [getDaymet\(\)](#), [getGLDAS\(\)](#), [getGridMET\(\)](#), [getISRIC\\_soils\(\)](#), [getLCMAP\(\)](#), [getLOCA\(\)](#), [getLOCA\\_hydro\(\)](#), [getLivneh\(\)](#), [getLivneh\\_fluxes\(\)](#), [getMACA\(\)](#), [getMODIS\(\)](#), [getNASADEM\(\)](#), [getNLDAS\(\)](#), [getPRISM\(\)](#), [getTerraClim\(\)](#), [getTerraClimNormals\(\)](#), [getVIC\(\)](#), [getWorldClim\(\)](#)

---

 getNLDAS

*Get NLDAS data*

---

### Description

Get NLDAS data

### Usage

```
getNLDAS(
  AOI,
  varname = NULL,
  model = "FORA0125_H.002",
  startDate,
  endDate = NULL,
  verbose = FALSE,
  ID = NULL,
  dryrun = FALSE
)
```

### Arguments

AOI	an sf of SpatVect point or polygon to extract data for
varname	variable name to extract (e.g. tmin)
model	GCM model name generating
startDate	a start date given as "YYYY-MM-DD" to extract data for
endDate	an end date given as "YYYY-MM-DD" to extract data for
verbose	Should messages be emitted?
ID	a column of unique identifiers
dryrun	Return summary of data prior to retrieving it

### Value

if AOI is polygon a list of SpatRasters, if AOI is a point then a data.frame of modeled records.

### See Also

Other shortcuts: [get3DEP\(\)](#), [getBCCA\(\)](#), [getCABCM\(\)](#), [getCHIRPS\(\)](#), [getDaymet\(\)](#), [getGLDAS\(\)](#), [getGridMET\(\)](#), [getISRIC\\_soils\(\)](#), [getLCMAP\(\)](#), [getLOCA\(\)](#), [getLOCA\\_hydro\(\)](#), [getLivneh\(\)](#), [getLivneh\\_fluxes\(\)](#), [getMACA\(\)](#), [getMODIS\(\)](#), [getNASADEM\(\)](#), [getNLCD\(\)](#), [getPRISM\(\)](#), [getTerraClim\(\)](#), [getTerraClimNormals\(\)](#), [getVIC\(\)](#), [getWorldClim\(\)](#)

---

`getPRISM`*Get PRISM data*

---

**Description**

Get PRISM data

**Usage**

```
getPRISM(  
  AOI,  
  varname = NULL,  
  startDate,  
  endDate = NULL,  
  timeRes = "daily",  
  verbose = FALSE,  
  ID = NULL,  
  dryrun = FALSE  
)
```

**Arguments**

AOI	an sf of SpatVect point or polygon to extract data for
varname	variable name to extract (e.g. tmin)
startDate	a start date given as "YYYY-MM-DD" to extract data for
endDate	an end date given as "YYYY-MM-DD" to extract data for
timeRes	daily or monthly
verbose	Should messages be emitted?
ID	a column of unique identifiers
dryrun	Return summary of data prior to retrieving it

**Value**

if AOI is polygon a list of SpatRasters, if AOI is a point then a data.frame of modeled records.

**See Also**

Other shortcuts: [get3DEP\(\)](#), [getBCCA\(\)](#), [getCABCM\(\)](#), [getCHIRPS\(\)](#), [getDaymet\(\)](#), [getGLDAS\(\)](#), [getGridMET\(\)](#), [getISRIC\\_soils\(\)](#), [getLCMAP\(\)](#), [getLOCA\(\)](#), [getLOCA\\_hydro\(\)](#), [getLivneh\(\)](#), [getLivneh\\_fluxes\(\)](#), [getMACA\(\)](#), [getMODIS\(\)](#), [getNASADEM\(\)](#), [getNLCD\(\)](#), [getNLDAS\(\)](#), [getTerraClim\(\)](#), [getTerraClimNormals\(\)](#), [getVIC\(\)](#), [getWorldClim\(\)](#)

---

 getTerraClim

*Get Terra Climate Data for an Area of Interest*

---

### Description

Get Terra Climate Data for an Area of Interest

### Usage

```
getTerraClim(
  AOI,
  varname = NULL,
  startDate = NULL,
  endDate = NULL,
  verbose = FALSE,
  ID = NULL,
  dryrun = FALSE
)
```

### Arguments

AOI	an sf of SpatVect point or polygon to extract data for
varname	variable name to extract (e.g. tmin)
startDate	a start date given as "YYYY-MM-DD" to extract data for
endDate	an end date given as "YYYY-MM-DD" to extract data for
verbose	Should messages be emitted?
ID	a column of unique identifiers
dryrun	Return summary of data prior to retrieving it

### Value

if AOI is polygon a list of SpatRasters, if AOI is a point then a data.frame of modeled records.

### See Also

Other shortcuts: [get3DEP\(\)](#), [getBCCA\(\)](#), [getCABCM\(\)](#), [getCHIRPS\(\)](#), [getDaymet\(\)](#), [getGLDAS\(\)](#), [getGridMET\(\)](#), [getISRIC\\_soils\(\)](#), [getLCMAP\(\)](#), [getLOCA\(\)](#), [getLOCA\\_hydro\(\)](#), [getLivneh\(\)](#), [getLivneh\\_fluxes\(\)](#), [getMACA\(\)](#), [getMODIS\(\)](#), [getNASADEM\(\)](#), [getNLCD\(\)](#), [getNLDAS\(\)](#), [getPRISM\(\)](#), [getTerraClimNormals\(\)](#), [getVIC\(\)](#), [getWorldClim\(\)](#)

---

getTerraClimNormals     *Get TerraClimate Normals for an Area of Interest*

---

### Description

These layers from TerraClimate were created using climatically aided interpolation of monthly anomalies from the CRU Ts4.0 and Japanese 55-year Reanalysis (JRA-55) datasets with WorldClim v2.0 climatologies.

### Usage

```
getTerraClimNormals(
  AOI,
  varname,
  scenario = "19812010",
  month = 1:12,
  verbose = FALSE,
  ID = NULL,
  dryrun = FALSE
)
```

### Arguments

AOI	an sf of SpatVect point or polygon to extract data for
varname	variable name to extract (e.g. tmin)
scenario	A climate or modeling scenario
month	numeric. and month or vector of months to access. Default is 1:12
verbose	Should messages be emitted?
ID	a column of unique identifiers
dryrun	Return summary of data prior to retrieving it

### Value

if AOI is polygon a list of SpatRasters, if AOI is a point then a data.frame of modeled records.

### See Also

Other shortcuts: [get3DEP\(\)](#), [getBCCA\(\)](#), [getCABCM\(\)](#), [getCHIRPS\(\)](#), [getDaymet\(\)](#), [getGLDAS\(\)](#), [getGridMET\(\)](#), [getISRIC\\_soils\(\)](#), [getLCMAP\(\)](#), [getLOCA\(\)](#), [getLOCA\\_hydro\(\)](#), [getLivneh\(\)](#), [getLivneh\\_fluxes\(\)](#), [getMACA\(\)](#), [getMODIS\(\)](#), [getNASADEM\(\)](#), [getNLCD\(\)](#), [getNLDAS\(\)](#), [getPRISM\(\)](#), [getTerraClim\(\)](#), [getVIC\(\)](#), [getWorldClim\(\)](#)

---

getVIC	<i>Get VIC data</i>
--------	---------------------

---

### Description

Get VIC data

### Usage

```
getVIC(
  AOI,
  varname,
  model = "CCSM4",
  scenario = "rcp45",
  startDate,
  endDate = NULL,
  verbose = FALSE,
  ID = NULL,
  dryrun = FALSE
)
```

### Arguments

AOI	an sf of SpatVect point or polygon to extract data for
varname	variable name to extract (e.g. tmin)
model	GCM model name generating
scenario	A climate or modeling scenario
startDate	a start date given as "YYYY-MM-DD" to extract data for
endDate	an end date given as "YYYY-MM-DD" to extract data for
verbose	Should messages be emitted?
ID	a column of unique identifiers
dryrun	Return summary of data prior to retrieving it

### Value

if AOI is polygon a list of SpatRasters, if AOI is a point then a data.frame of modeled records.

### See Also

Other shortcuts: [get3DEP\(\)](#), [getBCCA\(\)](#), [getCABCM\(\)](#), [getCHIRPS\(\)](#), [getDaymet\(\)](#), [getGLDAS\(\)](#), [getGridMET\(\)](#), [getISRIC\\_soils\(\)](#), [getLCMAP\(\)](#), [getLOCA\(\)](#), [getLOCA\\_hydro\(\)](#), [getLivneh\(\)](#), [getLivneh\\_fluxes\(\)](#), [getMACA\(\)](#), [getMODIS\(\)](#), [getNASADEM\(\)](#), [getNLCD\(\)](#), [getNLDAS\(\)](#), [getPRISM\(\)](#), [getTerraClim\(\)](#), [getTerraClimNormals\(\)](#), [getWorldClim\(\)](#)

---

getWorldClim	<i>Get WorldClim gridded weather and climate data for historical (near current) conditions.</i>
--------------	---

---

### Description

WorldClim is a database of high spatial resolution global weather and climate data. These data can be used for mapping and spatial modeling.

### Usage

```
getWorldClim(  
  AOI = NULL,  
  varname = NULL,  
  model = "wc2.1_5m",  
  month = 1:12,  
  ID = NULL,  
  verbose = TRUE  
)
```

### Arguments

AOI	an sf of SpatVect point or polygon to extract data for
varname	variable name to extract (e.g. tmin)
model	GCM model name generating
month	numeric. and month or vector of months to access. Default is 1:12
ID	a column of unique identifiers
verbose	Should messages be emitted?

### Value

if AOI is polygon a list of SpatRasters, if AOI is a point then a data.frame of modeled records.

### See Also

---

get_data	<i>Get DAP Array</i>
----------	----------------------

---

**Description**

Get DAP Array

**Usage**

```
get_data(dap)
```

**Arguments**

dap	dap description
-----	-----------------

**Value**

SpatRast

**See Also**

Other dap: [.resource\\_grid\(\)](#), [.resource\\_time\(\)](#), [climater\\_dap\(\)](#), [climater\\_filter\(\)](#), [dap\(\)](#), [dap\\_crop\(\)](#), [dap\\_get\(\)](#), [dap\\_meta\(\)](#), [dap\\_summary\(\)](#), [dap\\_to\\_local\(\)](#), [dap\\_xyzv\(\)](#), [extract\\_sites\(\)](#), [go\\_get\\_dap\\_data\(\)](#), [grid\\_meta\(\)](#), [make\\_ext\(\)](#), [make\\_vect\(\)](#), [merge\\_across\\_time\(\)](#), [parse\\_date\(\)](#), [read\\_dap\\_file\(\)](#), [read\\_ftp\(\)](#), [time\\_meta\(\)](#), [try\\_att\(\)](#), [var\\_to\\_terra\(\)](#), [variable\\_meta\(\)](#), [vrt\\_crop\\_get\(\)](#)

---

go_get_dap_data	<i>Read formatted DAP URL as SpatRast</i>
-----------------	---

---

**Description**

Read formatted DAP URL as SpatRast

**Usage**

```
go_get_dap_data(dap)
```

**Arguments**

dap	output from dap_crop
-----	----------------------

**Value**

SpatRast

**See Also**

Other dap: [.resource\\_grid\(\)](#), [.resource\\_time\(\)](#), [climater\\_dap\(\)](#), [climater\\_filter\(\)](#), [dap\(\)](#), [dap\\_crop\(\)](#), [dap\\_get\(\)](#), [dap\\_meta\(\)](#), [dap\\_summary\(\)](#), [dap\\_to\\_local\(\)](#), [dap\\_xyzv\(\)](#), [extract\\_sites\(\)](#), [get\\_data\(\)](#), [grid\\_meta\(\)](#), [make\\_ext\(\)](#), [make\\_vect\(\)](#), [merge\\_across\\_time\(\)](#), [parse\\_date\(\)](#), [read\\_dap\\_file\(\)](#), [read\\_ftp\(\)](#), [time\\_meta\(\)](#), [try\\_att\(\)](#), [var\\_to\\_terra\(\)](#), [variable\\_meta\(\)](#), [vrt\\_crop\\_get\(\)](#)

---

 go\_get\_zarr

*Retrieve data from a Zarr resource*

---

**Description**

This function retrieves or prepares metadata for data stored in a Zarr format.

**Usage**

```
go_get_zarr(zarr, get = TRUE)
```

**Arguments**

zarr	A data frame containing details of the Zarr resource to process. Each row should correspond to a single Zarr resource.
get	Logical. If 'TRUE', retrieves data; if 'FALSE', returns metadata information.

**Value**

If 'get = TRUE', returns the requested data as a matrix. If 'get = FALSE', returns a data frame containing metadata information for the resource.

**See Also**

Other zarr: [.resource\\_grid\\_zarr\(\)](#), [.resource\\_time\\_zarr\(\)](#), [read\\_zarr\\_file\(\)](#), [zarr\\_crop\(\)](#), [zarr\\_get\(\)](#), [zarr\\_to\\_terra\(\)](#), [zarr\\_xyzv\(\)](#)

**Examples**

```
## Not run:
# Example usage (assuming `zarr` is a properly formatted data frame):
# result <- go_get_zarr(zarr, get = TRUE)

## End(Not run)
```

---

grid_meta	<i>Find DAP grid metadata</i>
-----------	-------------------------------

---

**Description**

Find DAP grid metadata

**Usage**

```
grid_meta(raw)
```

**Arguments**

raw	data.frame
-----	------------

**Value**

data.frame

**See Also**

Other dap: [.resource\\_grid\(\)](#), [.resource\\_time\(\)](#), [climater\\_dap\(\)](#), [climater\\_filter\(\)](#), [dap\(\)](#), [dap\\_crop\(\)](#), [dap\\_get\(\)](#), [dap\\_meta\(\)](#), [dap\\_summary\(\)](#), [dap\\_to\\_local\(\)](#), [dap\\_xyzv\(\)](#), [extract\\_sites\(\)](#), [get\\_data\(\)](#), [go\\_get\\_dap\\_data\(\)](#), [make\\_ext\(\)](#), [make\\_vect\(\)](#), [merge\\_across\\_time\(\)](#), [parse\\_date\(\)](#), [read\\_dap\\_file\(\)](#), [read\\_ftp\(\)](#), [time\\_meta\(\)](#), [try\\_att\(\)](#), [var\\_to\\_terra\(\)](#), [variable\\_meta\(\)](#), [vrt\\_crop\\_get\(\)](#)

---

make_ext	<i>Convert catalog entry to extent</i>
----------	--

---

**Description**

Convert catalog entry to extent

**Usage**

```
make_ext(cat)
```

**Arguments**

cat	catalog entry (data.frame with an (Xn, X1, Yn, Y1, crs)
-----	---

**Value**

SpatExtent

**See Also**

Other dap: [.resource\\_grid\(\)](#), [.resource\\_time\(\)](#), [climater\\_dap\(\)](#), [climater\\_filter\(\)](#), [dap\(\)](#), [dap\\_crop\(\)](#), [dap\\_get\(\)](#), [dap\\_meta\(\)](#), [dap\\_summary\(\)](#), [dap\\_to\\_local\(\)](#), [dap\\_xyzv\(\)](#), [extract\\_sites\(\)](#), [get\\_data\(\)](#), [go\\_get\\_dap\\_data\(\)](#), [grid\\_meta\(\)](#), [make\\_vect\(\)](#), [merge\\_across\\_time\(\)](#), [parse\\_date\(\)](#), [read\\_dap\\_file\(\)](#), [read\\_ftp\(\)](#), [time\\_meta\(\)](#), [try\\_att\(\)](#), [var\\_to\\_terra\(\)](#), [variable\\_meta\(\)](#), [vrt\\_crop\\_get\(\)](#)

---

 make\_vect

*Make Vector*

---

**Description**

Make Vector

**Usage**

```
make_vect(cat)
```

**Arguments**

cat                    catalog entry (data.frame with an c(Xn, X1, Yn, Y1, crs))

**Value**

SpatVect

**See Also**

Other dap: [.resource\\_grid\(\)](#), [.resource\\_time\(\)](#), [climater\\_dap\(\)](#), [climater\\_filter\(\)](#), [dap\(\)](#), [dap\\_crop\(\)](#), [dap\\_get\(\)](#), [dap\\_meta\(\)](#), [dap\\_summary\(\)](#), [dap\\_to\\_local\(\)](#), [dap\\_xyzv\(\)](#), [extract\\_sites\(\)](#), [get\\_data\(\)](#), [go\\_get\\_dap\\_data\(\)](#), [grid\\_meta\(\)](#), [make\\_ext\(\)](#), [merge\\_across\\_time\(\)](#), [parse\\_date\(\)](#), [read\\_dap\\_file\(\)](#), [read\\_ftp\(\)](#), [time\\_meta\(\)](#), [try\\_att\(\)](#), [var\\_to\\_terra\(\)](#), [variable\\_meta\(\)](#), [vrt\\_crop\\_get\(\)](#)

---

 merge\_across\_time

*Merge List of SpatRaster's across time*

---

**Description**

Given a list of SpatRasters with possibly shared names, merge across time

**Usage**

```
merge_across_time(data)
```

**Arguments**

data            list of names SpatRasters

**Value**

data.frame with (varname, X\_name, Y\_name, T\_name)

**See Also**

Other dap: [.resource\\_grid\(\)](#), [.resource\\_time\(\)](#), [climater\\_dap\(\)](#), [climater\\_filter\(\)](#), [dap\(\)](#), [dap\\_crop\(\)](#), [dap\\_get\(\)](#), [dap\\_meta\(\)](#), [dap\\_summary\(\)](#), [dap\\_to\\_local\(\)](#), [dap\\_xyzv\(\)](#), [extract\\_sites\(\)](#), [get\\_data\(\)](#), [go\\_get\\_dap\\_data\(\)](#), [grid\\_meta\(\)](#), [make\\_ext\(\)](#), [make\\_vect\(\)](#), [parse\\_date\(\)](#), [read\\_dap\\_file\(\)](#), [read\\_ftp\(\)](#), [time\\_meta\(\)](#), [try\\_att\(\)](#), [var\\_to\\_terra\(\)](#), [variable\\_meta\(\)](#), [vrt\\_crop\\_get\(\)](#)

---

parse_date	<i>Parse Dates from duration and interval</i>
------------	---

---

**Description**

Parse Dates from duration and interval

**Usage**

```
parse_date(duration, interval)
```

**Arguments**

duration        time duration

interval        time interval

**See Also**

Other dap: [.resource\\_grid\(\)](#), [.resource\\_time\(\)](#), [climater\\_dap\(\)](#), [climater\\_filter\(\)](#), [dap\(\)](#), [dap\\_crop\(\)](#), [dap\\_get\(\)](#), [dap\\_meta\(\)](#), [dap\\_summary\(\)](#), [dap\\_to\\_local\(\)](#), [dap\\_xyzv\(\)](#), [extract\\_sites\(\)](#), [get\\_data\(\)](#), [go\\_get\\_dap\\_data\(\)](#), [grid\\_meta\(\)](#), [make\\_ext\(\)](#), [make\\_vect\(\)](#), [merge\\_across\\_time\(\)](#), [read\\_dap\\_file\(\)](#), [read\\_ftp\(\)](#), [time\\_meta\(\)](#), [try\\_att\(\)](#), [var\\_to\\_terra\(\)](#), [variable\\_meta\(\)](#), [vrt\\_crop\\_get\(\)](#)

---

read_dap_file	<i>Read from a OpenDAP landing page</i>
---------------	---

---

**Description**

Reads an OpenDap resources and returns metadata

**Usage**

```
read_dap_file(URL, varname = NULL, id, varmeta = TRUE)
```

**Arguments**

URL	URL to OpenDap resource
varname	name of variable to extract. If NULL, then get all
id	character. Uniquely named dataset identifier
varmeta	should variable metadata be appended?

**Value**

data.frame

**See Also**

Other dap: [.resource\\_grid\(\)](#), [.resource\\_time\(\)](#), [climater\\_dap\(\)](#), [climater\\_filter\(\)](#), [dap\(\)](#), [dap\\_crop\(\)](#), [dap\\_get\(\)](#), [dap\\_meta\(\)](#), [dap\\_summary\(\)](#), [dap\\_to\\_local\(\)](#), [dap\\_xyzv\(\)](#), [extract\\_sites\(\)](#), [get\\_data\(\)](#), [go\\_get\\_dap\\_data\(\)](#), [grid\\_meta\(\)](#), [make\\_ext\(\)](#), [make\\_vect\(\)](#), [merge\\_across\\_time\(\)](#), [parse\\_date\(\)](#), [read\\_ftp\(\)](#), [time\\_meta\(\)](#), [try\\_att\(\)](#), [var\\_to\\_terra\(\)](#), [variable\\_meta\(\)](#), [vrt\\_crop\\_get\(\)](#)

---

read_ftp	<i>Read from FTP</i>
----------	----------------------

---

**Description**

Read from FTP

**Usage**

```
read_ftp(URL, cat, lyrs = 1, AOI, ext = NULL, crs = NULL, dates = NULL)
```

**Arguments**

URL	Unique Resource Identifier (http or local)
cat	catalog element
lyrs	lyrs to extract
AOI	Area of Interest
ext	extent of source (if needed)
crs	crs of source (if needed)
dates	dates of data

**Value**

SpatRaster

**See Also**

Other dap: [.resource\\_grid\(\)](#), [.resource\\_time\(\)](#), [climater\\_dap\(\)](#), [climater\\_filter\(\)](#), [dap\(\)](#), [dap\\_crop\(\)](#), [dap\\_get\(\)](#), [dap\\_meta\(\)](#), [dap\\_summary\(\)](#), [dap\\_to\\_local\(\)](#), [dap\\_xyzv\(\)](#), [extract\\_sites\(\)](#), [get\\_data\(\)](#), [go\\_get\\_dap\\_data\(\)](#), [grid\\_meta\(\)](#), [make\\_ext\(\)](#), [make\\_vect\(\)](#), [merge\\_across\\_time\(\)](#), [parse\\_date\(\)](#), [read\\_dap\\_file\(\)](#), [time\\_meta\(\)](#), [try\\_att\(\)](#), [var\\_to\\_terra\(\)](#), [variable\\_meta\(\)](#), [vrt\\_crop\\_get\(\)](#)

---

read\_live\_catalog

*Read Live Catalog from Github release*

---

**Description**

Every month, our data catalog is refreshed. This function reads the most current catalog from the Github release.

**Usage**

```
read_live_catalog(
  url = paste0("https://github.com/mikejohnson51/climateR-catalogs",
    "/releases/latest/download/", "catalog.parquet")
)
```

**Arguments**

url	URL to read
-----	-------------

**Value**

data.frame

**See Also**

Other catalog: [catalog](#)

---

read_zarr_file	<i>Read Zarr File</i>
----------------	-----------------------

---

**Description**

Reads a Zarr file from a specified URL and extracts metadata and variable information.

**Usage**

```
read_zarr_file(URL, varname = NULL, id, varmeta = TRUE)
```

**Arguments**

URL	Character. The URL of the Zarr file.
varname	Character. Variable name to extract. Defaults to NULL.
id	Character. An identifier for the dataset.
varmeta	Logical. Whether to include variable metadata. Defaults to TRUE.

**Value**

A data frame with merged metadata and variable information.

**See Also**

Other zarr: [.resource\\_grid\\_zarr\(\)](#), [.resource\\_time\\_zarr\(\)](#), [go\\_get\\_zarr\(\)](#), [zarr\\_crop\(\)](#), [zarr\\_get\(\)](#), [zarr\\_to\\_terra\(\)](#), [zarr\\_xyzv\(\)](#)

---

time_meta	<i>Find DAP time metadata</i>
-----------	-------------------------------

---

**Description**

Find DAP time metadata

**Usage**

```
time_meta(raw)
```

**Arguments**

raw	data.frame
-----	------------

**Value**

data.frame

**See Also**

---

 try\_att

*TryCatch around RNetCDF::att.get.nc()*

---

**Description**

TryCatch around RNetCDF::att.get.nc()

**Usage**

```
try_att(nc, variable, attribute)
```

**Arguments**

nc	"NetCDF" object which points to the NetCDF dataset. Found with RNetCDF::open.nc.
variable	ID or name of the variable from which the attribute will be read, or "NC_GLOBAL" for a global attribute.
attribute	Attribute name or ID.

**Value**

Vector with a data type that depends on the NetCDF variable. For NetCDF variables of type NC\_CHAR, the R type is either character or raw, as specified by argument rawchar. For NC\_STRING, the R type is character. Numeric variables are read as double precision by default, but the smallest R type that exactly represents each external type is used if fitnum is TRUE.

---

variable_meta	<i>Find DAP variable metadata</i>
---------------	-----------------------------------

---

**Description**

Find DAP variable metadata

**Usage**

```
variable_meta(raw, verbose = TRUE)
```

**Arguments**

raw	data.frame
verbose	emit messages

**Value**

data.frame

**See Also**

var_to_terra	<i>Variable Array to SpatRast</i>
--------------	-----------------------------------

---

**Description**

Variable Array to SpatRast

**Usage**

```
var_to_terra(var, dap)
```

**Arguments**

var	numeric array
dap	dap description

**Value**

SpatRast

**See Also**

Other dap: `.resource_grid()`, `.resource_time()`, `climater_dap()`, `climater_filter()`, `dap()`, `dap_crop()`, `dap_get()`, `dap_meta()`, `dap_summary()`, `dap_to_local()`, `dap_xyzv()`, `extract_sites()`, `get_data()`, `go_get_dap_data()`, `grid_meta()`, `make_ext()`, `make_vect()`, `merge_across_time()`, `parse_date()`, `read_dap_file()`, `read_ftp()`, `time_meta()`, `try_att()`, `variable_meta()`, `vrt_crop_get()`

---

vrt\_crop\_get

*VRT Crop*

---

**Description**

VRT Crop

**Usage**

```
vrt_crop_get(
  URL = NULL,
  catalog = NULL,
  AOI = NULL,
  grid = NULL,
  varname = NULL,
  start = NULL,
  end = NULL,
  toptobottom = FALSE,
  verbose = TRUE
)
```

**Arguments**

URL	local file path or URL
catalog	subset of open.dap catalog
AOI	an sf of SpatVect point or polygon to extract data for
grid	a list containing an extent (), and crs
varname	variable name to extract (e.g. tmin)
start	for non "dated" items, start can be called by index
end	for non "dated" items, end can be called by index
toptobottom	should data be inverse?
verbose	Should dap_summary be printed?

**Value**

SpatRaster

**See Also**

Other dap: [.resource\\_grid\(\)](#), [.resource\\_time\(\)](#), [climater\\_dap\(\)](#), [climater\\_filter\(\)](#), [dap\(\)](#), [dap\\_crop\(\)](#), [dap\\_get\(\)](#), [dap\\_meta\(\)](#), [dap\\_summary\(\)](#), [dap\\_to\\_local\(\)](#), [dap\\_xyzv\(\)](#), [extract\\_sites\(\)](#), [get\\_data\(\)](#), [go\\_get\\_dap\\_data\(\)](#), [grid\\_meta\(\)](#), [make\\_ext\(\)](#), [make\\_vect\(\)](#), [merge\\_across\\_time\(\)](#), [parse\\_date\(\)](#), [read\\_dap\\_file\(\)](#), [read\\_ftp\(\)](#), [time\\_meta\(\)](#), [try\\_att\(\)](#), [var\\_to\\_terra\(\)](#), [variable\\_meta\(\)](#)

---

writeDodsrc	<i>Write dodsrc file</i>
-------------	--------------------------

---

**Description**

Write a dodsrc file that is valid for a netrc file

**Usage**

```
writeDodsrc(netrcFile = getNetrcPath(), dodsrcFile = ".dodsrc")
```

**Arguments**

netrcFile	A character. A path to where the netrc file should be.
dodsrcFile	The path to the dodsrc file you want to write By default will go to your home directory, which is advised

**Value**

A character vector containing the netrc file path

**See Also**

Other netrc: [checkDodsrc\(\)](#), [checkNetrc\(\)](#), [getDodsrcPath\(\)](#), [getNetrcPath\(\)](#), [writeNetrc\(\)](#)

---

writeNetrc	<i>Write netrc file</i>
------------	-------------------------

---

**Description**

Write a netrc file that is valid for accessing [urs.earthdata.nasa.gov](http://urs.earthdata.nasa.gov)

**Usage**

```
writeNetrc(
  login,
  password,
  machine = "urs.earthdata.nasa.gov",
  netrcFile = getNetrcPath(),
  overwrite = FALSE
)
```

**Arguments**

login	A character. Email address used for logging in on earthdata
password	A character. Password associated with the login.
machine	the machine you are logging into
netrcFile	A character. A path to where the netrc file should be written. By default will go to your home directory, which is advised
overwrite	A logical. overwrite the existing netrc file?

**Details**

The database is accessed with the user's credentials. A netrc file storing login and password information is required. See [here](#). Once set up you must do the following (1) Login to EarthData (2) Go to Applications > Authorized Apps (3) If NASA GESDISC DATA ARCHIVE is not in the Approved Applications list, select APPROVE MORE APPLICATIONS (4) Find NASA GESDISC DATA ARCHIVE and click AUTHORIZE for instruction on how to register and set DataSpace credential.

**Value**

A character vector containing the netrc file path

**See Also**

Other netrc: [checkDodsrc\(\)](#), [checkNetrc\(\)](#), [getDodsrcPath\(\)](#), [getNetrcPath\(\)](#), [writeDodsrc\(\)](#)

**Examples**

```
## Not run:
writeNetrc(
  login = "XXX@email.com",
  password = "yourSecretPassword"
)

## End(Not run)
```

---

zarr\_crop

*Crop Zarr Data to a Spatial and Temporal Subset*

---

**Description**

Crops data in a Zarr file based on spatial (AOI) and temporal (start/end) filters.

**Usage**

```
zarr_crop(
  URL = NULL,
  catalog = NULL,
  AOI = NULL,
  startDate = NULL,
  endDate = NULL,
  start = NULL,
  end = NULL,
  varname = NULL,
  verbose = TRUE
)
```

**Arguments**

URL	Character. The URL of the Zarr file. Defaults to NULL.
catalog	Data frame. Metadata catalog for the Zarr file. Defaults to NULL.
AOI	Spatial object. Area of interest for cropping. Defaults to NULL.
startDate	Character. Start date for cropping. Defaults to NULL.
endDate	Character. End date for cropping. Defaults to NULL.
start	Numeric. Start index for cropping. Defaults to NULL.
end	Numeric. End index for cropping. Defaults to NULL.
varname	Character. Variable name to crop. Defaults to NULL.
verbose	Logical. Whether to print verbose output. Defaults to TRUE.

**Value**

A cropped dataset matching the specified criteria.

**See Also**

Other zarr: [.resource\\_grid\\_zarr\(\)](#), [.resource\\_time\\_zarr\(\)](#), [go\\_get\\_zarr\(\)](#), [read\\_zarr\\_file\(\)](#), [zarr\\_get\(\)](#), [zarr\\_to\\_terra\(\)](#), [zarr\\_xyzv\(\)](#)

---

zarr\_get

*Process and retrieve Zarr data as terra objects*

---

**Description**

This function processes Zarr resources and converts them into terra spatial objects.

**Usage**

```
zarr_get(zarr, varname = NULL)
```

**Arguments**

zarr	A data frame containing details of the Zarr resources to process. Each row should correspond to a single Zarr resource.
varname	Character vector specifying the variable names to retrieve. If 'NULL', retrieves all available variables.

**Value**

Returns processed data as terra SpatRaster objects or merged data frames, depending on the input and Zarr properties.

**See Also**

Other zarr: [.resource\\_grid\\_zarr\(\)](#), [.resource\\_time\\_zarr\(\)](#), [go\\_get\\_zarr\(\)](#), [read\\_zarr\\_file\(\)](#), [zarr\\_crop\(\)](#), [zarr\\_to\\_terra\(\)](#), [zarr\\_xyzv\(\)](#)

**Examples**

```
## Not run:
# Example usage (assuming `zarr` is a properly formatted data frame):
# result <- zarr_get(zarr, varname = "temperature")

## End(Not run)
```

---

zarr_to_terra	<i>Convert data to terra SpatRaster or data frame format</i>
---------------	--

---

**Description**

Converts extracted Zarr data into terra SpatRaster objects or data frames based on spatial and temporal dimensions.

**Usage**

```
zarr_to_terra(var, zarr)
```

**Arguments**

var	A variable containing extracted Zarr data.
zarr	A data frame containing details of the Zarr resource, including metadata.

**Value**

Returns a terra SpatRaster object or data frame containing the processed data.

**See Also**

Other zarr: [.resource\\_grid\\_zarr\(\)](#), [.resource\\_time\\_zarr\(\)](#), [go\\_get\\_zarr\(\)](#), [read\\_zarr\\_file\(\)](#), [zarr\\_crop\(\)](#), [zarr\\_get\(\)](#), [zarr\\_xyzv\(\)](#)

**Examples**

```
## Not run:  
# Example usage (assuming `var` and `zarr` are properly formatted):  
# result <- zarr_to_terra(var, zarr)  
  
## End(Not run)
```

---

zarr\_xyzv

*Extract Variable Information from Zarr Object*

---

**Description**

Extracts variable and coordinate information from a Zarr object.

**Usage**

```
zarr_xyzv(obj, varname = NULL, varmeta = FALSE)
```

**Arguments**

obj	Zarr object or file path.
varname	Character. Specific variable name to extract. Defaults to NULL.
varmeta	Logical. Whether to include variable metadata. Defaults to FALSE.

**Value**

A data frame containing variable metadata and coordinate information.

**See Also**

Other zarr: [.resource\\_grid\\_zarr\(\)](#), [.resource\\_time\\_zarr\(\)](#), [go\\_get\\_zarr\(\)](#), [read\\_zarr\\_file\(\)](#), [zarr\\_crop\(\)](#), [zarr\\_get\(\)](#), [zarr\\_to\\_terra\(\)](#)
